

Planetary Health Report Card (Medicine):

University of California, Irvine

SCHOOL OF MEDICINE

University of California • Irvine

Discover · Teach · Heal

2022-2023 Contributing Team:

- Students: Clara Riggle, Serah Yim
- Primary Contact: Clara Riggle, Criggle@hs.uci.edu

Summary of Findings

Summary of Findings	
Overall	D +
Curriculum	D
 Aspects of planetary health are discussed in lectures during Clinical Foundations (CF), but lack longitudinally. A structured elective on climate change and health was approved by the education committee, but was not offered due to lack of student enrollment. Recommendations: Incorporated teaching about having planetary health conversations with particular expanding education on how climate change affects human health in all aspects the CF curricular Irvine should ensure it offers the novel climate and health elective, now planned for Spring 202 	on atients and um. UC
Interdisciplinary Research	
 UC Irvine hosted a series of webinars related to planetary health and sustainability in 2021. Recommendations: There are interested students and faculty at UC Irvine who have become more interested in working in this space. However, many of these clinicians are not active in research. Ut these connections to find who is interested in this research, and how they can contribute, will be critical amplifying UC Irvine's potential as an institution at the forefront of the climate and health space. 	
Community Outreach and Advocacy	F
 UC Irvine School of Medicine has very limited community outreach relating to planetary health. Recommendations: Many grassroots organizations in Orange County provide critical services to patients UCI (i.e., Project Kinship, Latino Health Access, and Hope Community Services). However, many clinicians are unaware of these organizations. UC Irvine should consider building a strong planetary healt presence through the student organization Medical Students for a Sustainable Future. 	
Support for Student-Led Initiatives	D

port for Student Lea Interactives

- The UC Irvine School of Medicine has provided some administrative support for student-led initiatives in planetary health, but does not offer financial support and does not provide structured opportunities for students. Existing frameworks for planetary health at UCI School of Medicine are quite nascent, and will not only require wider student participation to effect change, but also faculty and institutional leadership.
- **Recommendations**: Beyond building the presence of student groups like Medical Education for a Sustainable Future, UCI should consider creating a track for students interested in this work similar to UCI's <u>LEAD-ABC</u> (Leadership Education to Advance Diversity African, Black, and Caribbean), Integrative Health, or <u>PRIME-LC</u> (Program in Medical Education Latino Community).

Campus Sustainability

В

- UC Irvine as an institution is progress-oriented in campus sustainability, largely due to University of California's Sustainable Practices Policy and UC Irvine's Climate and Action Plan (developed in 2007). However, the medical school itself has little involvement in advancing campus sustainability.
- **Recommendations**: Despite progress attributed to the UC Sustainable Practices Policy (SPP), there is still much to improve regarding campus sustainability at the medical center. UC Irvine should strive to achieve more by spearheading initiatives like establishing sustainability guidelines for on-campus events.

Statement of Purpose

Planetary health is human health.

The Planetary Health Alliance describes planetary health as "a solutions-oriented, transdisciplinary field and social movement focused on analyzing and addressing the impacts of human disruptions to Earth's natural systems on human health and all life on Earth." This definition is intentionally broad, intended to encompass the multitude of ways that the environment can affect health, including water scarcity, changing food systems, urbanization, biodiversity shifts, natural disasters, climate change, changing land use and land cover, global pollution, and changing biogeochemical flows. The health of humanity is dependent on our environment, and our environment is changing rapidly and in disastrous ways. Although the World Health Organization has called climate change "the greatest threat to global health in the 21st century," many medical school's institutional priorities do not reflect the urgency of this danger to human health.

As future health professionals, we must be prepared to address the impacts of human-caused environmental changes on our patients' health. This preparation is in the hands of the institutions providing our medical training. It is imperative that we hold our institutions accountable for educating medical students about the health impacts of climate change and other anthropogenic environmental changes, generating research to better understand health impacts and solutions, supporting related student initiatives, embracing sustainable practices as much as possible, and engaging with surrounding communities that are most affected by environmental threats. Because climate change and environmental threats disproportionately affect vulnerable populations (for example, communities of color, older adults sensitive to health threats, and individuals in low-resource settings), these issues are inherently ones of equity and justice.

With the purpose of increasing planetary health awareness and accountability among medical schools, we have created a Planetary Health Report Card that medical students internationally can use to grade and compare their home institutions on an annual basis. This medical-student-driven initiative aims to compare medical schools nationally and internationally on the basis of discrete metrics in five main category areas: 1) planetary health curriculum, 2) interdisciplinary research in health and environment, 3) university support for student planetary health initiatives, and 4) community outreach centered on environmental health impacts 5) medical school campus sustainability.

Definitions & Other Considerations

Definitions:

- Planetary Health: is described by the Planetary Health Alliance as "the health of human civilisation and the state of the natural systems on which it depends." For example, topics such as climate change, declining biodiversity, shortages of arable land and freshwater, and pollution would all fall under the realm of planetary health. Both planetary health and traditional 'environmental health' examine the relationship between human health and the external environment, including extreme temperatures, chemicals, vector-borne diseases, etc. Planetary health explicitly concerns itself with the potential health harms associated with human-caused perturbations of natural systems. Therefore, the human health focus of planetary health makes the field well-adapted for the context of medical school education. Throughout this report card, we use the term planetary health to refer to this broad swath of topics, but resources do not need to explicitly include the term "planetary health" to satisfy the metric.
- Sustainable Healthcare: As defined by the Academy of Royal Colleges, sustainable healthcare
 involves ensuring the ability to provide good quality care for future generations by balancing the
 economic, environmental, and social constraints and demands within health care settings. A
 sustainable healthcare system maintains population health, reduces disease burden and minimises
 use of healthcare services.
- Education for Sustainable Healthcare (ESH): is defined as the process of equipping current and future health professionals with the knowledge, attitudes, skills and capacity to provide environmentally sustainable services through health professional education, thus working to decrease the enormous environmental impact of the healthcare industry. Planetary Health Education is an integral part of this education rather than an end in itself. This is because knowledge on Planetary Health is required to be able to fully understand the necessity of sustainable healthcare as well as being part of the broader knowledge needed to fully protect and promote health. In summary, ESH is covered by the three Priority Learning Outcomes of the Centre of Sustainable Healthcare below, and Planetary Health Education is embraced in the first learning objective and is a fundamental requirement to achieve learning outcomes 2 and 3:
 - 1. Describe how the environment and human health interact at different levels.
 - 2. Demonstrate the knowledge and skills needed to improve the environmental sustainability of health systems.
 - 3. Discuss how the duty of a doctor to protect and promote health is shaped by the dependence of human health on the local and global environment.
- Medical School vs. Institution: When "medical school" is specified in the report card, this only
 refers to curriculum and resources offered by the School of Medicine and does not include
 offerings from other parts of the university (e.g. undergraduate departments (USA), other related
 departments (e.g. Public Health, Population Health departments). In contrast, when "institution"

is specified in the report card, we are referring to the university more broadly. Any resource reasonably accessible by medical students, no matter where in the institution the resource comes from or if it is specifically targeted for medical students, can meet this metric.

- Environmental history (Metric #19 in Curriculum Section): This is a series of questions providers are taught to ask during medical encounters that elicits patients' exposures and environmental risk factors. Historically, this has included consideration of exposures like pesticides, asbestos, and lead, though in the modern era shaped by climate change, it can be expanded to include things like wildfire smoke exposure, air pollution and mold after flooding. Key components include place of residence over the lifecourse, occupational history, food and water sources (e.g. meat from industrial feeding operations, regular fishing in contaminated water, access to clean drinking water), and exposure to air pollution.
- **Elective:** The word "elective" refers to an optional course or lecture series that a medical student can opt to take part in but is not a requirement in the core curriculum. Generally, these elective courses take place in the preclinical curriculum but vary by school.
- Clerkship: This is a term used in the USA to refer to placements that medical students go on e.g.
 Pediatrics, General medicine, Psychiatry. In the UK these are referred to as rotations or
 placements.

Other considerations:

• If there are more than one "tracks" at your medical school with two different curricula (for example, Harvard Medical School has a Pathways and HST curriculum track), you can choose to fill out a report card for each track, or fill out just one report card and average the scores received by each track in cases where the scores are different (see the 2021 Harvard or Oxford report cards as examples).

Added to our resources last year, the Planetary Health Report Card <u>Literature Review by Metric</u> collates the evidence behind each of the metrics in the Planetary Health Report Card. It serves as a collection of references for further learning and a resource for those advocating for increased planetary health engagement at their institutions.

Planetary Health Curriculum

Section Overview: This section evaluates the integration of relevant planetary health topics into the medical school curriculum. Today's medical students will be on the frontlines of tackling the health effects of climate and other environmental changes. Therefore, it is critical that medical students are trained to understand the health effects of these changes, as well as planetary health issues and principles more broadly. Topics like the changing geography of vector-borne diseases, the health consequences of air pollution, environmental health inequities, and disaster response principles must be part of every medical school's core curriculum.

Curriculum: General

1. Did your <u>medical school</u> offer elective courses (student selected modules) to engage students in Education for Sustainable Healthcare or Planetary Health in the last year?	
3	Yes, the medical school has offered more than one elective whose primary focus is ESH/planetary health in the past year.
2	Yes, the medical school has offered one elective whose primary focus is ESH/planetary health in the past year.
1	The medical school does not have any electives whose primary focus is ESH/planetary health, but there are one or more electives that include a lecture on planetary health.
0	No, the medical school has not offered any electives on planetary health or electives that include ESH/planetary health topics in the past year.
Score explanation: UC Irvine School of Medicine does not offer any electives on planetary health or electives that include ESH/Planetary health topics in the past year.	

Curriculum: Health Effects of Climate Change

2. Does your <u>medical school</u> curriculum address the relationship between extreme heat, health risks, and climate change?	
3	This topic was explored in depth by the core curriculum.
2	This topic was briefly covered in the core curriculum.
1	This topic was covered in elective coursework.
0	This topic was not covered.
Score explanation: As part of the first year clinical foundations curriculum at UC Irvine School of	

Score explanation: As part of the first year clinical foundations curriculum at UC Irvine School of Medicine, a lecture titled "Climate Change and Health" covers the basics of climate change and

principles of the relationship between human health and climate change, including the risks of extreme heat. Additionally, the topic is touched upon during multiple different lectures throughout the first and second year coursework.

3. Does your <u>medical school</u> curriculum address the impacts of extreme weather events on individual health and/or on healthcare systems?	
3	This topic was explored in depth by the core curriculum.
2	This topic was briefly covered in the core curriculum.
1	This topic was covered in elective coursework.
0	This topic was not covered.

Score explanation: This topic is briefly covered in the first year clinical foundations lecture at UC Irvine School of Medicine, Climate Change and Health, with information on the cause of extreme weather changes and the human health effects of this. This lecture is a core clinical foundations lecture.

4. Does your medical school curriculum address the impact of climate change on the changing patterns of infectious diseases? 3 This topic was explored in depth by the core curriculum. 2 This topic was briefly covered in the core curriculum. 1 This topic was covered in elective coursework. O This topic was not covered.

Score explanation: This topic is not covered in any current courses at UC Irvine School of Medicine.

5. Does your <u>medical school</u> curriculum address the respiratory health effects of climate change and air pollution?	
3	This topic was explored in depth by the core curriculum.
2	This topic was briefly covered in the core curriculum.
1	This topic was covered in elective coursework.
0	This topic was not covered.

Score explanation: Environmental impacts on respiratory diseases such as asthma and emphysema were briefly covered at UC Irvine School of Medicine during the Second Year lecture Obstructive Lung Disease by Dr. Robert Edwards. This is a non-mandatory lecture with testable curricula.

6. Does your <u>medical school</u> curriculum address the cardiovascular health effects of climate change, including increased heat?	
3	This topic was explored in depth by the core curriculum.
2	This topic was briefly covered in the core curriculum.
1	This topic was covered in elective coursework.
0	This topic was not covered.

Score explanation: This was not covered in the primary or elective coursework at UC Irvine.

7. Does your medical school curriculum address the mental health and neuropsychological effect
of environmental degradation and climate change?

- This topic was explored in depth by the core curriculum.
- 2 This topic was **briefly** covered in the **core** curriculum.
- 1 This topic was covered in **elective** coursework.
- 0 This topic was **not** covered.

Score explanation: This topic was covered in the UC Irvine School of Medicine clinical foundations lecture: Climate Change and Health, by Dr. Marnie Granados, especially in regards to pediatric and adolescent patient's neuropsychological effects as a reaction to climate change.

8. Does your <u>medical school</u> curriculum address the relationships between health, individual patient food and water security, ecosystem health, and climate change?

- This topic was explored **in depth** by the **core** curriculum.
- 2 This topic was **briefly** covered in the **core** curriculum.
- 1 This topic was covered in **elective** coursework.
- 0 This topic was **not** covered.

Score explanation: During first year curriculum clinical foundation lecture at UC Irvine School of Medicine: Nutrition and Healthy Diet, some connections of ecosystem health and food insecurity are

discussed. Additionally, during the elective course culinary medicine, food and water insecurities are discussed more in depth and their causes related to environmental degradation and climate change are explored.

9. Does your <u>medical school</u> curriculum address the outsized impact of climate change on marginalized populations such as those with low SES, women, communities of color, Indigenous communities, children, homeless populations, and older adults?	
3	This topic was explored in depth by the core curriculum.
2	This topic was briefly covered in the core curriculum.
1	This topic was covered in elective coursework.
0	This topic was not covered.

Score explanation: This is very briefly covered at UC Irvine School of Medicine in Clinical Foundations lecture: Social Determinants of Health, by Dr. <u>John Billimeck</u>. Tthe lecture describes vulnerable populations and how some marginalized communities are at higher risk for environmental health hazards.

10. Does your <u>medical school</u> curriculum address the unequal regional health impacts of climate change globally?	
3	This topic was explored in depth by the core curriculum.
2	This topic was briefly covered in the core curriculum.
1	This topic was covered in elective coursework.
0	This topic was not covered.
Score explanation: This is not covered in any course work at UCI.	

Curriculum: Environmental Health & the Effects of Anthropogenic Toxins on Human Health

11. Does your <u>medical school</u> curriculum address the reproductive health effects of industry-related environmental toxins (e.g. air pollution, pesticides)?	
3	This topic was explored in depth by the core curriculum.
2	This topic was briefly covered in the core curriculum.
1	This topic was covered in elective coursework.

0 This topic was **not** covered.

Score explanation: This topic is briefly covered in a variety of lectures throughout first and second year curriculum, although not in depth, it is discussed in pharmacology and reproductive pathology during the second year.

12. Does your <u>medical school</u> curriculum address important human-caused environmental threats that are relevant to the university's surrounding community?	
3	This topic was explored in depth by the core curriculum.
2	This topic was briefly covered in the core curriculum.
1	This topic was covered in elective coursework.
0	This topic was not covered.
Score explanation: This topic is not covered.	

13. To what extent does your <u>medical school</u> emphasize the importance of Indigenous knowledge and value systems as essential components of planetary health solutions?	
3	Indigenous knowledge and value systems are integrated throughout the medical school's planetary health education
2	Indigenous knowledge and value systems as essential components of planetary health solutions are included briefly in the core curriculum.
1	Indigenous knowledge and value systems as essential components of planetary health solutions are included in elective coursework.
0	This topic was not covered.
Score explanation: This topic was not covered.	

14. Does your medical school curriculum address the outsized impact of anthropogenic environmental toxins on marginalized populations such as those with low SES, women, communities of color, children, homeless populations, Indigenous populations, and older adults?

3 This topic was explored in depth by the core curriculum.

2 This topic was briefly covered in the core curriculum.

1 This topic was covered in elective coursework.

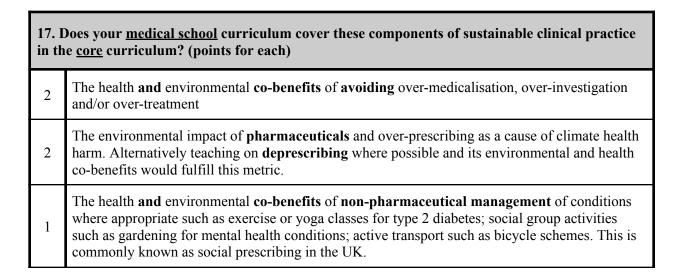

O This topic was not covered.

Score explanation: This topic was not covered.

Curriculum: Sustainability

15. Does your <u>medical school</u> curriculum address the environmental and health co-benefits of a plant-based diet?		
3	This topic was explored in depth by the core curriculum.	
2	This topic was briefly covered in the core curriculum.	
1	This topic was covered in elective coursework.	
0	This topic was not covered.	
Score explanation: This topic has not been covered in the context to the environment, only in relation to human health benefits.		

16. Does your <u>medical school</u> curriculum address the carbon footprint of healthcare systems?		
3	This topic was explored in depth by the core curriculum	
2	This topic was briefly covered in the core curriculum.	
1	This topic was covered in elective coursework.	
0	This topic was not covered.	
Score explanation: This topic was not covered.		

1	Environmental impact of surgical healthcare on planetary health and the climate crisis, and how can it be mitigated	
The impact of anaesthetic gases on the healthcare carbon footprint and ways to reduce are environmental impacts, such as total intravenous anaesthesia or choosing less environmental harmful anaesthetic gas options with reduced greenhouse gas emissions The impact of inhalers on the healthcare carbon footprint and the environmental benefit of powdered inhalers over metered dose inhalers.		
		1
Score explanation: This topic is very briefly discussed in clinical foundations lectures duri second year, in relation to N_2O and highly fluorinated gases as greenhosue gases, with the investigation of total intravenous anesthesia as an alternative.		

Curriculum: Clinical Applications

18. In training for patient encounters, does your <u>medical school's</u> curriculum introduce strategies to have conversations with patients about the health effects of climate change?		
2	Yes, there are strategies introduced for having conversations with patients about climate change in the core curriculum.	
1	Yes, there are strategies introduced for having conversations with patients about climate change in elective coursework.	
0	No, there are not strategies introduced for having conversations with patients about climate change	
Score explanation: This topic was not covered.		

19. In training for patient encounters, does your <u>medical school's</u> curriculum introduce strategies for taking an environmental history or exposure history?		
2	Yes, the core curriculum includes strategies for taking an environmental history.	
1	Only elective coursework includes strategies for taking an environmental history.	
0	No, the curriculum does not include strategies for taking an environmental history.	
Score explanation: Given UC Irvine's location in Southern California and relatively frequent incidence of soil botulism, wildfire smoke, and air pollution, students are taught to take a thorough environmental history when assessing paitients.		

Curriculum: Administrative Support for Planetary Health

20. Is your medical school currently in the process of implementing or improving Education for Sustainable Healthcare (ESH)/planetary health education? Yes, the medical school is currently in the process of making major improvements to ESH/planetary health education. Yes, the medical school is currently in the process of making minor improvements to ESH/planetary health education.

Score explanation: There are currently student-led efforts to expand climate health education. This year, a lecture on "Climate Change and Health" was added to the Clinical Foundations core curriculum. A "Climate Change and Health" elective course is also expected to be offered in Spring of 2024.

21. How well are the aforementioned planetary health/Education for Sustainable Healthcare topics integrated longitudinally into the <u>core</u> curriculum?

- 6 Planetary health/ESH topics are **well integrated** into the core medical school curriculum.
- Some planetary health/ESH topics are appropriately integrated into the core medical student curriculum
- 2 Planetary health/ESH is not integrated and is primarily addressed in (a) standalone lecture(s).
- There is **minimal/no** education for sustainable healthcare.

Score explanation: There is minimal education in this subject of sustainable healthcare at UCI.

22. Does your <u>medical school</u> employ a member of faculty to specifically oversee and take responsibility for the incorporation of planetary health and sustainable healthcare as a theme throughout the course?

- Yes, the medical school has a specific faculty/staff member responsible for overseeing curricular integration of planetary health and sustainable healthcare
- No, the **medical school** does **not** have a specific faculty/staff member responsible for overseeing curricular integration of planetary health and sustainable healthcare.

Score explanation: There are currently no faculty/staff member who oversees the integration of planetary health and sustainable healthcare into the curriculum.

Section	Total	(20 out	of 72)
---------	-------	---------	--------

27.78%

Back to Summary Page <u>here</u>

Interdisciplinary Research

Section Overview: This section evaluates the quality and quantity of interdisciplinary planetary health research at the medical school and broader institution. Interactions between health and the environment are complex and multifactorial. While climate change has been extensively studied from an environmental science perspective, planetary health is an emerging field. As leading health institutions with talented researchers and research resources, medical schools should fund research studying the health effects of climate change and anthropogenic environmental toxins. This obligation is particularly strong because the public and policymakers are more attentive to climate change when its implications for human health are emphasized.

1. Are there researchers engaged in planetary health research and healthcare sustainability research at your medical school? Yes, there are faculty members at the medical school who have a primary research focus in planetary health or healthcare sustainability. Yes, there are individual faculty members at the medical school who are conducting research related to planetary health or healthcare sustainability, but it is not their primary research focus. There are planetary health and/or healthcare sustainability researchers at the institution, but none associated with the medical school. No, there are no planetary health and/or healthcare sustainability researchers at the institution or medical school at this time.

Score explanation: Although there are faculty who are becoming more active in healthcare sustainability and planetary health efforts (i.e., Dr. Cynthia Haq, Dr. Rakhi Dayal, and Dr. Marnie Granados to name a few), none are conducting planetary health research at this time.

Is there a dedicated department or institute for interdisciplinary planetary health research at your institution? There is at least one dedicated department or institute for interdisciplinary planetary health research. There is not currently a department or institute for interdisciplinary planetary health research, but there are plans to open one in the next 3 years. There is an Occupational and Environmental Health department, but no interdisciplinary department or institute for planetary health research. There is no dedicated department or institute.

Score explanation: There are multiple interdisciplinary institute dedicated to planetary health research, including <u>AIR UCI</u>, <u>Solutions that Scale</u>, and <u>Center for Environmental Health Disparities Research</u>.

3. Is there a process by which communities disproportionately impacted by climate change and environmental injustice give input or make decisions about the research agenda at your medical school? Yes, there is a process in which community members impacted by climate and environmental injustice have decision-making power in the climate + environmental research agenda. Yes, there is a process in which community members impacted by climate and environmental injustice advise the climate + environmental research agenda. No, but there are current efforts to establish a process for community members to advise or make decisions on the research agenda.

Score explanation: To our knowledge, there is not this sort of system in place at UCI.

There is **no** process, and **no** efforts to create such a process.

4. Does your institution have a planetary health website that centralizes ongoing and past research related to health and the environment? There is an easy-to-use, adequately comprehensive website that centralizes various campus resources related to health and the environment including all of the following: upcoming events, leaders in planetary health at your institution, and relevant funding opportunities. There is a website that attempts to centralize various campus resources related to health and the environment, but it is hard-to-use, not updated, or not adequately comprehensive.

The **institution** has an **Office of Sustainability website** that includes **some** resources related to health and the environment.

0 There is **no** website.

0

Score explanation: The UC Irvine Office of Sustainability has a well-developed but outdated website outlining many of the initiatives and different projects related to health and the environment.

5. Has your institution recently hosted a conference or symposium on topics related to planetary health? Yes, the medical school has hosted at least one conference or symposium on topics related to planetary health in the past year. Yes, the institution has hosted at least one conference or symposium on topics related to planetary health in the past year.

Yes, the institution has hosted a conference on topics related to planetary health in the years.	
1	The institution has not hosted any conferences directly, but they have provided financial support for a local planetary health event.
0	No, the institution has not hosted a conference on topics related to planetary health in the past three years.

Score explanation: In 2022, UC Irvine hosted the International Conference on Environmental Peacebuilding, a large scale conference focusing on multiple topics involving the intersection of climate change, environmental justice and public health.

Section Total (8 out of 17)	47.06%
------------------------------	--------

Back to summary page <u>here</u>

Community Outreach and Advocacy

<u>Section Overview:</u> This section evaluates medical school engagement in community outreach and advocacy efforts associated with planetary health. Researching and teaching planetary health is necessary but not sufficient. It is critical that institutions also directly engage with communities most affected by environmental health harms. Although climate change is a problem largely created by those with power and resources, its impacts fall disproportionately on under-resourced populations and communities of color. Institutions should partner with local communities affected by climate change and pollution to share information about environmental health threats, advocate together for change, and provide opportunities for students to be a part of this work.

1. Does your <u>medical school</u> partner with community organizations to promote planetary and environmental health?		
3	Yes, the medical school meaningfully partners with multiple community organizations to promote planetary and environmental health.	
2	Yes, the medical school meaningfully partners with one community organization to promote planetary and environmental health.	
1	The institution partners with community organizations, but the medical school is not part of that partnership.	
0	No, there is no such meaningful community partnership.	

Score explanation: Although the UC Irvine chapter of Medical Students for a Sustainable Future makes has established partnerships with <u>Coastkeeper Alliance</u> and <u>Climate Health Now</u>, its status as a new student organization means meaningful work has not yet been advanced.

2. Does your medical school offer community-facing courses or events regarding planetary health? The medical school offers community-facing courses or events at least once every year. The medical school offers courses or events open to the community at least once per year, but they are not primarily created for a community audience. The institution has offered community-facing courses or events, but the medical school was not involved in planning those courses or events. The institution/medical school have not offered such community-facing courses or events.

Score explanation: So far there have been no community facing courses or events regarding planetary health hosted by the medical school, but the Blum Center at UCI has a department for Climate Change and Nature loss which has hosted multiple events. In addition, individual faculty members at the School

of Medicine have assisted in planning community-facing events (for instance, Dr. Cynthia Haq is on the planning committee for the Global Consortium on Climate and Health Education's upcoming educational event/panel, Code Blue), but the School of Medicine itself has not planned such an event.

3. Does your medical school have regular coverage of issues related to planetary health and/or
sustainable healthcare in university update communications?

- Yes, all students **regularly** receive communication updates dedicated to planetary health and/or sustainable healthcare.
- Yes, planetary health and/or sustainable healthcare topics are **sometimes** included in communication updates.
- O Students **do not** receive communications about planetary health or sustainable healthcare.

Score explanation: Planetary health and sustainable healthcare are not typically covered in university updates, but they have been occasionally spotlighted, such as when the school was working on an initiative to decrease waste by making masks from recycled material (the Blue Mask Project).

4. Does the <u>institution</u> or <u>main affiliated hospital trust</u> engage in professional education activities targeting individuals post graduation with the aim of ensuring their knowledge and skills in planetary health and sustainable healthcare remain up to date during their professional career?

- Yes, the **institution** or **main affiliated hospital trust** offers multiple in-person or online courses relating to planetary health and/or sustainable healthcare for post-graduate providers, including at least one with a primary focus of planetary health.
- Yes, the **institution** or **main affiliated hospital trust** offers one course relating to planetary health and/or sustainable healthcare for post-graduate providers
- 0 There are **no** such accessible courses for post-graduate providers

Score explanation: There is no such offering at UCI.

5. Does your <u>medical school</u> or its primary <u>affiliated hospital</u> have accessible educational materials for patients about environmental health exposures?

- 2 Yes, **all** affiliated hospitals have accessible educational materials for patients.
- 1 **Some** affiliated hospitals have accessible educational materials for patients.
- 0 **No** affiliated medical centers have accessible educational materials for patients.

Score explanation: No materials are available currently at UCI.

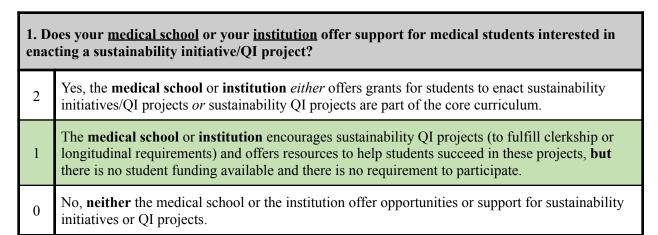

6. Does your <u>medical school</u> or its <u>primary affiliated hospital</u> have accessible educational materials for patients about climate change and health impacts?	
2	Yes, all affiliated hospitals have accessible educational materials for patients.
1	Some affiliated hospitals have accessible educational materials for patients.
0	No affiliated hospitals have accessible educational materials for patients.
Score explanation: UCI does not have this information accessible for patients.	

Section Total (2 out of 14)	14.29%
------------------------------	--------

Back to summary page <u>here</u>

Support for Student-Led Planetary Health Initiatives

<u>Section Overview:</u> This section evaluates institutional support for student-led planetary health initiatives, such as funding, fellowships, programming, and student groups. Planetary health is a young field and, as young people facing a future deeply shaped by climate change, students are often some of the first at an institution to engage with it. Institutions should provide support for students to engage in sustainability quality improvement (QI) initiatives, discover mentors in their area of interest, and receive funding for planetary health projects.

Score explanation: There have been sustainability QI projects in the past used to fulfill first year requirements, and students have worked with UCI Health facilities in these projects (example: The Blue Mask Project), but there is not strong support nor funding available, and this is not a requirement.

${\bf 2.\ Does\ your\ \underline{institution}}\ offer\ opportunities\ for\ medical\ students\ to\ do\ research\ related\ to\ planetary\ health\ and/or\ sustainable\ healthcare?}$

- The **institution** has a **specific** research program or fellowship for students interested in doing planetary health/sustainable healthcare research.
- There are research opportunities for students to perform research related to planetary health/sustainable healthcare, but these **require student initiative** to seek these out and carry them out in their spare time.
- There are **no opportunities** for students to engage in planetary health/sustainable healthcare research.

Score explanation: UC Irvine offers many opportunities for research for students interested in planetary health and sustainable healthcare research, through the <u>Center for Environmental Health</u>, AIR UCI, the <u>UCI Blum Center for Poverty Alleviation</u>. However, this is largely based on the student's interest and initiative, and no funded opportunities exist.

3. Does the medical school have a webpage where medical students can find specific information related to planetary health and/or sustainable healthcare activities and mentors within the medical school? For example, projects achieved, current initiatives underway at the medical school and/or contact of information of potential mentors.

The medical school has a webpage with specific information related to planetary health or sustainable healthcare that includes up-to-date information on relevant initiatives and contact information of potential mentors.

There is a medical school webpage that features some information on projects and mentors within planetary health and sustainable healthcare within the medical school, but it lacks key information.

There is no medical-school specific webpage for locating planetary health and/or sustainable healthcare projects or mentors.

Score explanation: There is no medical school specific webpage for locating planetary health opportunities, research projects or mentors.

- 4. Does your <u>medical school</u> have registered student groups dedicated towards fostering a culture of planetary health engagement, scholarship, and advocacy on campus, supported by faculty advisors?
- Yes, there is a student organization **with faculty support** at my medical school dedicated to planetary health or sustainability in healthcare.
- Yes, there is a student organization at my medical school dedicated to planetary health or sustainability in healthcare but it **lacks faculty support.**
- No, there is **not** a student organization at my institution dedicated to planetary health or sustainability in healthcare.

Score explanation: UC Irvine school of medicine has a chapter of Medical Students for a Sustainable Future, with an active faculty mentor, and additional faculty support. This group is active in the community, locally and nationally, and works on advocacy and engagement on campus.

- 5. Is there a student liaison representing sustainability interests who serves on a <u>medical school</u> or <u>institutional</u> decision-making council to advocate for curriculum reform and/or sustainability best practices?
 - Yes, there is a student representative that serves on a medical school or institutional decision-making council/committee.
- 0 No, there is no such student representative.

Score explanation: There is no medical student currently serving on a decision-making council representing sustainability.

6. In the past year, has the <u>institution</u> had one or more co-curricular planetary health programs or initiatives in the following categories? (1 point each)		
1	Projects where students are able to gain experience in organic agriculture and sustainable food systems, such as gardens, farms, community supported agriculture (CSA), fishery programs, or urban agriculture projects.	
1	Panels, speaker series, or similar events related to planetary health that have students as an intended audience.	
1	Events in which students learn directly from members of a local environmental justice community about the climate and environmental challenges they face, and how health professionals can partner with their community to address these exposures and impacts.	
1	Cultural arts events, installations or performances related to planetary health that have students as an intended audience.	
1	Local volunteer opportunities related to building community resilience to anthropogenic environmental impacts.	
1	Wilderness or outdoors programs (e.g., that organize hiking, backpacking, kayaking, or other outings for students)	

Score explanation: UC Irvine has offered opportunities for involvement in sustainability and climate change. Past examples include: Huntington Beach and Wetlands Clean-ups, and hiking, camping, and kayaking trips (although these are primarily geared towards Wilderness Medicine education).

Section Total (5 out of 15)	33.33%

Campus Sustainability

Section Overview: This section evaluates the support and engagement in sustainability initiatives by the medical school and/or institution. The healthcare industry is a major contributor to greenhouse gas emissions as well as pollution that harms local, regional, and global ecosystems. While healthcare is, by nature, a resource-intensive endeavor, the healthcare sector is well poised to lead the world to a more sustainable future. This will involve scrutinizing every aspect of how our systems operate, from where we source our energy, to how we build our infrastructure, to what companies we invest in. Our medical schools, clinics, and hospitals must set the standard for sustainable practices, and show other sectors what is possible when it comes to minimizing environmental impact.

1. Does your medical school and/or institution have an Office of Sustainability?		
3	Yes, there is an Office of Sustainability with multiple full-time staff dedicated to campus sustainability. If the Office of Sustainability serves the entire campus, there is at least one designated staff member for sustainability at the hospital and/or medical school.	
2	There is an Office of Sustainability with one or more full-time staff dedicated to campus sustainability, but no specific staff member in charge of medical school and/or hospital sustainability.	
1	There are no salaried sustainability staff , but there is a sustainability task force or committee	
0	There are no staff members or task force responsible for overseeing campus sustainability	
~		

Score explanation: UC Irvine has an Office of Sustainability with a team of staff dedicated to sustainability, with three staff members for whom this is there specific role at UCI Health at the UCI Medical Center.

2. How ambitious is your <u>institution/medical school</u> plan to reduce its own carbon footprint?		
5	The institution/medical school has a written and approved plan to achieve carbon neutrality by 2030	
3	The institution/medical school has a written and approved plan to achieve carbon neutrality by 2040	
1	The institution/medical school has a stated goal of carbon neutrality by 2040 but has not created a plan to reach that goal or the plan is inadequate	
0	The institution/medical school does not meet any of the requirements listed above	
	Score explanation: UCI's Climate Action plan is ambitious; as part of the larger University of California Sustainable Practices Policy, UCI intends to achieve Scope 1 and 2 carbon neutrality	

by 2025 (with complete carbon neutrality, including scope 3 emissions, by 2050). Unique to UCI are its strategies in achieving goals in energy: reducing energy use intensity by at least 2% average annually; obtaining 100% clean electricity by 2025, and achieving at least 40% of natural gas cobusted on-site at all UCI campus and health locations to be biogas.

3. Do buildings/infrastructure used by the <u>medical school</u> for teaching (not including the hospital) utilize renewable energy?		
3	Yes medical school buildings are 100% powered by renewable energy	
2	Medical school buildings source >80% of energy needs from off-site and/or on-site renewable energy.	
1	Medical school buildings source >20% of energy needs from off-site and/or on-site renewable energy.	
0	Medical school buildings source <20% of energy needs from off-site and/or on-site renewable energy.	

Score explanation: Although there is not information on the specific medical school campus, the campus is connected to and an extension of the UCI undergraduate campus, which has been following the UCI Climate Action Plan under UC Carbon Neutrality Initiative. This plan has increasing amounts of renewable and clean energy source for all UCI campus and health campuses, working on increasing renewable energy since 2007. Per our inquiry, many of the buildings on campus utilize renewable energy, although we could not determine a specific number.

4. Are sustainable building practices utilized for new and old buildings on the <u>medical school</u> campus, with design and construction of new buildings and remodeling of old buildings conforming to a published sustainability rating system or building code/guideline?

- Yes, sustainable building practices are utilized for new buildings on the medical school campus and the **majority** of old buildings **have been retrofitted** to be more sustainable.
- Sustainable building practices are utilized for new buildings on the medical school campus, but most old buildings have **not been retrofitted.**
- 1 Sustainable building practices are **inadequately or incompletely** implemented for new buildings.
- O Sustainability is **not considered** in the construction of new buildings.

Score explanation: Through the University of California Sustainable Practices Initiative, all new buildings on University of California campuses (including UCI) employ "green building" practices, such that all new buildings will be LEED "Silver" certified and all existing buildings will be retrofitted to meet LEED for Interior Design and Construction standards. The full policy can be viewed here.

5. Has the medical school implemented strategies to encourage and provide environmentally-friendly transportation options for students and reduce the environmental impact of commuting? Yes, the medical school has implemented strategies to encourage and provide environmentally-friendly transportation options such as safe active transport, public transport, or carpooling and these options are well-utilized by students. Alternatively, the campus location is not amenable to unsustainable forms of transportation by default. The medical school has implemented some strategies to provide environmentally-friendly transportation options, but the options are unsatisfactorily accessible or advertised. The medical school has not implemented strategies to encourage and provide

Score explanation: UC Irvine School of Medicine has not implemented strategies to provide environmentally friendly transportation options to access the school of medicine or the medical center for clinical duties.

6. Does your <u>medical school</u> have an organics recycling program (compost) and a conventional recycling program (aluminum/paper/plastic/glass)?

- Yes, the medical school has **both** compost **and** recycling programs accessible to students and faculty.
- The medical school has **either** recycling **or** compost programs accessible to students and faculty, but not both.
- There is **no** compost or recycling program at the medical school.

environmentally-friendly transportation options.

0

Score explanation: UCI's medical school buildings all have multiple waste bins located around campus for trash and recycling. **Some but not all buildings have compost bins as well.** These buildings are accessed by students and faculty.

7. Does the <u>medical school</u> apply sustainability criteria when making decisions about the campus food and beverage selections (e.g. local sourcing, reduced meat, decreased plastic packaging)?

- Yes, the medical school has a**dequate s**ustainability requirements for food and beverages, including meat-free days or no red-meat, and **is engaged** in efforts to increase food and beverage sustainability.
- There are sustainability guidelines for food and beverages, but they are **insufficient or optional**. The medical school **is engaged** in efforts to increase food and beverage sustainability.
- There are sustainability guidelines for food and beverages, but they are **insufficient or optional.**The medical school is **not** engaged in efforts to increase food and beverage sustainability.

There are **no** sustainability guidelines for food and beverages.

Score explanation: UCI is committed to sustainable food practices with goals that include achieving zero waste, reducing water usage, and providing sustainable foods. UCI, in conjunction with Aramark, aims to maintain greater than 20% sustainable food purchases including those that are locally sourced and are USDA Organic, Fair Trade, and Rainforest Alliance certified. Currently, there are no specific days set aside for reduced or no-meat foods.

8. Does the <u>medical school</u> or <u>institution</u> apply sustainability criteria when making decisions about supply procurement?

- Yes, the medical school has **adequate** sustainability requirements for supply procurement **and** is **engaged** in efforts to increase sustainability of procurement.
- There are sustainability guidelines for supply procurement, but they are **insufficient or optional.**The medical school is **engaged** in efforts to increase sustainability of procurement.
- There are sustainability guidelines for supply procurement, but they are **insufficient or optional.**The medical school is **not engaged** in efforts to increase sustainability of procurement.
- There are **no** sustainability guidelines for supply procurement.

Score explanation: The University of California has a system-wide manual for sustainability procurement guidelines that are "strongly recommended, if not mandatory." These guidelines "look to reduce unnecessary purchasing first, then prioritize purchase of surplus or multiple use products, before looking at recyclable, compostable, or otherwise sustainable products."

9. Are there sustainability requirements or guidelines for events hosted at the medical school?

- 2 Every event hosted at the medical school **must** abide by sustainability criteria.
- The medical school **strongly recommends or incentivizes** sustainability measures, but they are **not required.**
- There are **no** sustainability guidelines for medical school events.

2

Score explanation: UCI School of Medicine does not have any sustainability guidelines for medical school events.

10. Does your <u>medical school</u> have programs and initiatives to assist with making lab spaces more environmentally sustainable?

Yes, the medical school has **programs** and **initiatives** to assist with making lab spaces more environmentally sustainable.

- There are **guidelines** on how to make lab spaces more environmentally sustainable, but not programs or initiatives.
- There are **no** efforts at the medical school to make lab spaces more sustainable.

Score explanation: UCI has a Green Labs program which works with principal investigators, lab managers, and students to educate and assist in the implementation of more sustainable practices in campus laboratories. The program provides resources and guidance in areas including energy efficiency, waste reduction, water conservation, sustainable purchasing, and green chemistry. Upon incorporating greater sustainable practices, research groups are awarded official Green Labs certification.

11. Does your institution's endowment portfolio investments include fossil-fuel companies? 4 The institution is entirely divested from fossil fuels and has made a commitment to reinvest divested funds into renewable energy companies or renewable energy campus initiatives. 3 The institution is entirely divested from fossil fuels. 2 The institution has partially divested from fossil fuel companies or has made a commitment to fully divest, but currently still has fossil fuel investments. 1 The institution has not divested from fossil-fuel companies, but faculty and/or students are conducting organized advocacy for divestment. O Yes, the institution has investments with fossil-fuel companies and there have been no efforts to change that.

Score explanation: In 2019, The University of California system publicly announced plans to fully divest \$80 billion from fossil fuels by the end of the year. However, the UC Irvine Foundation has 12% of funds that are unaccounted for and that may remain invested in fossil fuels. UC Irvine Foundation has declined several requests to comment.

Section Total (23 out of 32)	71.88%

Grading

Section Overview

This section focuses on the grading of the report card. The institution received a grade for each of the individual sections as well as an overall institutional grade. Section point totals were tallied, divided by the total points available for the section, and converted to a percentage. The overall institutional grade is a

weighted average of the section grades, with curriculum receiving a higher weight owing to its larger number of metrics. Letter grades for each section and the institution overall were then assigned according to the table below.

Letter Grade*	Percentage
A	80% - 100%
В	60% - 79%
С	40% - 59%
D	20% - 39%
F	0% - 19%

Planetary Health Grades for the University of California, Irvine School of Medicine

The following table presents the individual section grades and overall institutional grade for the University of California, Irvine School of Medicine on this medical-school-specific Planetary Health Report Card.

Section	Raw Score %	Letter Grade
Planetary Health Curriculum (30%)	$(20/72) \times 100 = 27.78\%$	D
Interdisciplinary Research (17.5%)	(8/17) x 100 = 47.06%	С
Community Outreach and Advocacy (17.5%)	(2/14) x 100 = 14.29%	F
Support for Student-led Planetary Health Initiatives (17.5%)	(5/15) x 100= 33.33%	D
Campus Sustainability (17.5%)	$(23/32) \times 100 = 71.88\%$	В
Institutional Grade	(27.78x0.3 + 47.06x0.175 + 14.29x0.175 + 33.33x0.175 + 71.88x0.175) = 37.48%	D+
