# Planetary Health Report Card (Medicine): *University of Rochester School of Medicine & Dentistry*

---

UNIVERSITY of  
**ROCHESTER**  
MEDICAL CENTER

2023-2024 Contributing Team:

- Students: Kathleen Li, Kyle Yuan, Phillip Yang, Henna Purewal, Enya Wang
- Faculty Mentors: Dr. Valerie Lou & Dr. Sandra Jee
- \*Primary Contact: Enya Wang (enya\_wang@urmc.rochester.edu)

## Summary of Findings

<b>Overall</b>	<b>C-</b>
<b><u>Curriculum</u></b>	<b>D</b>
<ul style="list-style-type: none"> <li>University of Rochester includes planetary health in the curriculum, but it lacks integration longitudinally.</li> <li><b>Recommendations:</b> There is a lack of teaching about introducing conversations about planetary health into conversations with patients. This could be introduced in clinical skills, or early years ICM/FBP teaching. This year, the school has changed their curriculum to remove one of the planetary health lectures. We recommend that this lecture be re-instated. Also, integration of planetary health should be included in more aspects of pre-clinicals</li> </ul>	
<b><u>Interdisciplinary Research</u></b>	<b>B+</b>
<ul style="list-style-type: none"> <li>There is a new department to support healthcare sustainability and planetary health research, but their website is not comprehensive.</li> <li>Though there is a process for community members to advise climate research, the medical school should create a process that allows them to directly vote on research to improve engagement.</li> </ul>	
<b><u>Community Outreach and Advocacy</u></b>	<b>D</b>
<ul style="list-style-type: none"> <li>URSMD faculty are involved in community outreach and advocacy, however, this involvement is primarily limited to 2-3 clinicians who are connected to several broader medical centres and community groups in Rochester to promote PH engagement and education.</li> <li>Besides these 2-3 incredible faculty members there are no established connections with others involved in community outreach efforts related to PH.</li> <li>Medical students at URSMD, have difficulty engaging in community outreach and advocacy initiatives related to PH due to a lack of a centralized database of faculty and outreach efforts.</li> </ul>	
<b><u>Support for Student-Led Initiatives</u></b>	<b>B</b>
<ul style="list-style-type: none"> <li>URSMD supports a student interest group focused on PH. However, there are no students representing sustainability interests on an institutional decision-making council.</li> <li>Funding exists for students to pursue research in PH; however, there is no dedicated webpage for PH initiatives.</li> </ul>	
<b><u>Campus Sustainability</u></b>	<b>C-</b>
<ul style="list-style-type: none"> <li>Both the University of Rochester and URSMD have robust programs available to individual students and faculty such as carpooling, biking, and recycling. Several of the Medical Center dining locations incorporate some sustainability criteria into their food and beverage selections as well.</li> <li>The University of Rochester has not made a formal commitment to carbon neutrality, and although it has an Office of Sustainability with a full-time staff coordinator, more staffing and programming relating to sustainability (perhaps in collaboration with the undergraduate) at the medical school is recommended. Another recommendation is to have a student representative to serve as a bridge between administration and students to maintain efforts in increasing sustainability.</li> </ul>	

# Statement of Purpose

*Planetary health is human health.*

The Planetary Health Alliance describes planetary health as “a solutions-oriented, transdisciplinary field and social movement focused on analyzing and addressing the impacts of human disruptions to Earth’s natural systems on human health and all life on Earth.” This definition is intentionally broad, intended to encompass the multitude of ways that the environment can affect health, including water scarcity, changing food systems, urbanization, biodiversity shifts, natural disasters, climate change, changing land use and land cover, global pollution, and changing biogeochemical flows. The health of humanity is dependent on our environment, and our environment is changing rapidly and in disastrous ways. Although the World Health Organization has called climate change “the greatest threat to global health in the 21st century,” many medical school’s institutional priorities do not reflect the urgency of this danger to human health.

As future health professionals, we must be prepared to address the impacts of human-caused environmental changes on our patients’ health. This preparation is in the hands of the institutions providing our medical training. It is imperative that we hold our institutions accountable for educating medical students about the health impacts of climate change and other anthropogenic environmental changes, generating research to better understand health impacts and solutions, supporting related student initiatives, embracing sustainable practices as much as possible, and engaging with surrounding communities that are most affected by environmental threats. Because climate change and environmental threats disproportionately affect vulnerable populations (for example, communities of color, older adults sensitive to health threats, and individuals in low-resource settings), these issues are inherently ones of equity and justice.

With the purpose of increasing planetary health awareness and accountability among medical schools, we have created a Planetary Health Report Card that medical students internationally can use to grade and compare their home institutions on an annual basis. This medical-student-driven initiative aims to compare medical schools nationally and internationally on the basis of discrete metrics in five main category areas: 1) planetary health curriculum, 2) interdisciplinary research in health and environment, 3) university support for student planetary health initiatives, and 4) community outreach centered on environmental health impacts 5) medical school campus sustainability.

# Definitions & Other Considerations

## Definitions:

- **Planetary Health:** is described by the Planetary Health Alliance as “the health of human civilisation and the state of the natural systems on which it depends.” For example, topics such as climate change, declining biodiversity, shortages of arable land and freshwater, and pollution would all fall under the realm of planetary health. Both planetary health and traditional ‘environmental health’ examine the relationship between human health and the external environment, including extreme temperatures, chemicals, vector-borne diseases, etc. Planetary health explicitly concerns itself with the potential health harms associated with human-caused perturbations of natural systems. Therefore, the human health focus of planetary health makes the field well-adapted for the context of medical school education. Throughout this report card, we use the term planetary health to refer to this broad swath of topics, but resources do not need to explicitly include the term “planetary health” to satisfy the metric.
- **Sustainable Healthcare:** As defined by the Academy of Royal Colleges, sustainable healthcare involves ensuring the ability to provide good quality care for future generations by balancing the economic, environmental, and social constraints and demands within health care settings. A sustainable healthcare system maintains population health, reduces disease burden and minimises use of healthcare services.
- **Education for Sustainable Healthcare (ESH):** is defined as the process of equipping current and future health professionals with the knowledge, attitudes, skills and capacity to provide environmentally sustainable services through health professional education, thus working to decrease the enormous environmental impact of the healthcare industry. Planetary Health Education is an integral part of this education rather than an end in itself. This is because knowledge on Planetary Health is required to be able to fully understand the necessity of sustainable healthcare as well as being part of the broader knowledge needed to fully protect and promote health. In summary, ESH is covered by the three Priority Learning Outcomes of the Centre of Sustainable Healthcare below, and Planetary Health Education is embraced in the first learning objective and is a fundamental requirement to achieve learning outcomes 2 and 3:
  1. Describe how the environment and human health interact at different levels.
  2. Demonstrate the knowledge and skills needed to improve the environmental sustainability of health systems.
  3. Discuss how the duty of a doctor to protect and promote health is shaped by the dependence of human health on the local and global environment.
- **Medical School vs. Institution:** When “medical school” is specified in the report card, this only refers to curriculum and resources offered by the School of Medicine and does not include offerings from other parts of the university (e.g. undergraduate departments (USA), other related departments (e.g. Public Health, Population Health departments). In contrast, when “institution” is specified in the report card, we are referring to the university more

broadly. Any resource reasonably accessible by medical students, no matter where in the institution the resource comes from or if it is specifically targeted for medical students, can meet this metric.

- **Environmental history (Metric #19 in Curriculum Section):** This is a series of questions providers are taught to ask during medical encounters that elicits patients' exposures and environmental risk factors. Historically, this has included consideration of exposures like pesticides, asbestos, and lead, though in the modern era shaped by climate change, it can be expanded to include things like wildfire smoke exposure, air pollution and mold after flooding. Key components include place of residence over the lifecourse, occupational history, food and water sources (e.g. meat from industrial feeding operations, regular fishing in contaminated water, access to clean drinking water), and exposure to air pollution.
- **Elective:** The word "elective" refers to an optional course or lecture series that a medical student can opt to take part in but is not a requirement in the core curriculum. Generally, these elective courses take place in the preclinical curriculum but vary by school.
- **Clerkship:** This is a term used in the USA to refer to placements that medical students go on e.g. Pediatrics, General medicine, Psychiatry. In the UK these are referred to as rotations or placements.

**Other considerations:**

- If there are more than one "tracks" at your medical school with two different curricula (for example, Harvard Medical School has a Pathways and HST curriculum track), you can choose to fill out a report card for each track, or fill out just one report card and average the scores received by each track in cases where the scores are different (see the 2021 Harvard or Oxford report cards as examples).

**Added to our resources in 2022, the Planetary Health Report Card [Literature Review by Metric](#) collates the evidence behind each of the metrics in the Planetary Health Report Card. It serves as a collection of references for further learning and a resource for those advocating for increased planetary health engagement at their institutions.**

# Planetary Health Curriculum

***Section Overview:*** This section evaluates the integration of relevant planetary health topics into the medical school curriculum. Today's medical students will be on the frontlines of tackling the health effects of climate and other environmental changes. Therefore, it is critical that medical students are trained to understand the health effects of these changes, as well as planetary health issues and principles more broadly. Topics like the changing geography of vector-borne diseases, the health consequences of air pollution, environmental health inequities, and disaster response principles must be part of every medical school's core curriculum.

## Curriculum: General

1.1. Did your <u>medical school</u> offer elective courses (student selected modules) to engage students in Education for Sustainable Healthcare or Planetary Health in the last year?	
3	Yes, the medical school has offered <b>more than one</b> elective whose primary focus is ESH/planetary health in the past year.
2	Yes, the medical school has offered <b>one</b> elective whose primary focus is ESH/planetary health in the past year.
1	The medical school does <b>not</b> have any electives whose primary focus is ESH/planetary health, but there are one or more electives that include a <b>lecture</b> on planetary health.
0	No, the medical school has <b>not</b> offered any electives on planetary health or electives that include ESH/planetary health topics in the past year.
<p><i>Score explanation: URSMD will offer two electives pertaining to Education for Sustainable Healthcare or Planetary Health. The first is entitled “Planetary Health for the Practising Physician” (EDD619). This hybrid online and in-person course will highlight a broad range of the health implications of climate change that we are currently seeing and will continue to see in the future as clinicians. In addition, they discuss the healthcare industry's contribution to climate change and highlight opportunities to enhance communication abilities to better serve as physician advocates with respect to climate change and human health. This course consists of traditional lectures via zoom, flipped classrooms, journal clubs and field trips to local sustainability organisations. The course is in its third year.</i></p> <p><i>The second course is entitled “Occupational and Environmental Medicine” (EHS601). The goals of this class are to Discuss the different types of services offered by occupational and environmental medicine programs (preventive, medical, and rehabilitative). Discuss the role of toxicology, industrial hygiene, and ergonomics as it relates to occupational and environmental medicine. Demonstrate an understanding of the New York State Workers' Compensation system, including successful completion of a C4 report to the Workers' Compensation Board.</i></p>	

## Curriculum: Health Effects of Climate Change

1.2. Does your <u>medical school</u> curriculum address the relationship between extreme heat, health risks, and climate change?
--

3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.
<p><i>Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: “Planetary Health &amp; Climate Justice” &amp; “Global Health.” These lectures introduced the impacts of extreme heat, health risks, and climate change but were removed from the course this year.</i></p> <p><i>As a part of the Disease Processes and Therapeutics Course in the Rheumatology Block in 2nd year, there is a lecture titled “Common Allergies” which includes a few slides on the impact of climate change and allergies.</i></p> <p><i>As part of the Women’s and Children’s Health Basic Science Block in 3rd year, the session “Complementary Viewpoints: Climate Change and Health” includes a discussion of the impacts of extreme weather events on individual health, but does not go into depth on its effect on healthcare systems.</i></p>	

<b>1.3. Does your <u>medical school</u> curriculum address the impacts of extreme weather events on individual health and/or on healthcare systems?</b>	
3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.
<p><i>Score explanation:</i></p> <p><i>As part of the Women’s and Children’s Health Basic Science Block in 3rd year, the session “Complementary Viewpoints: Climate Change and Health” includes a discussion of the impacts of extreme weather events on individual health, but does not go into depth on its effect on healthcare systems.</i></p>	

<b>1.4. Does your <u>medical school</u> curriculum address the impact of climate change on the changing patterns of infectious diseases?</b>	
3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.

*Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: “Planetary Health & Climate Justice” & “Global Health.” These lectures introduced the impact of climate change on the changing patterns of infectious diseases but were removed from the course this year.*

*As a part of, the “Host Defense”, there is a brief discussion of the impact of the warming climate on water borne infections, vector-borne disease, and the spreading of zoonotic and emerging disease.*

*As a part of the Disease Processes and Therapeutics Course in the Rheumatology Block in 2nd year, there is a lecture titled “Common Allergies” which includes a few slides on the impact of climate change and allergies.*

**1.5. Does your medical school curriculum address the respiratory health effects of climate change and air pollution?**

3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.

*Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: “Planetary Health & Climate Justice” & “Global Health.” These lectures addressed the respiratory health effects of climate change and air pollution but were removed from the course this year.*

*As a part of the Disease Processes and Therapeutics Course in the Rheumatology Block in 2nd year, there is a lecture titled “Common Allergies” which includes a few slides on the impact of climate change and allergies.*

*In the elective, Planetary Health for the Practising Physician (EDD619), the effects of climate change and air pollution are addressed in the lecture entitled “Air pollution, climate change, and human health.”*

**1.6. Does your medical school curriculum address the cardiovascular health effects of climate change, including increased heat?**

3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.

*Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: “Planetary Health & Climate Justice” & “Global Health.” These lectures addressed the impact of climate change on cardiovascular health but were removed from the course this year.*

**1.7. Does your medical school curriculum address the mental health and neuropsychological effects of environmental degradation and climate change?**

3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.

*Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: "Planetary Health & Climate Justice" & "Global Health." These lectures addressed the impact of climate change on mental health and neuropsychological effects but were removed from the course this year.*

*In the elective, Planetary Health for the Practising Physician (EDD619), mental health and neuropsychological effects of environmental degradation and climate change are discussed in the lecture "Mental Health and Climate Change."*

*In the elective (PRM601) Community Health Improvement Course (CHIC) 2: Population Health and Finance, mental health is discussed sporadically throughout lectures and through some hands-on activities.*

*In the elective EHS601 Occupational and Environmental Medicine there are lectures on hearing conservation programs and audiogram interpretations, principles of industrial hygiene and toxicology, preventive medicine, agricultural medicine, ergonomics, and occupational biopsychosocial assessments. The idea of mental health is often discussed throughout.*

**1.8. Does your medical school curriculum address the relationships between health, individual patient food and water security, ecosystem health, and climate change?**

3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.

*Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: "Planetary Health & Climate Justice" & "Global Health." These lectures introduced the impact of climate change on patient food and water security but were removed from the course this year.*

**1.9. Does your medical school curriculum address the outsized impact of climate change on marginalized populations such as those with low SES, women, communities of color, Indigenous communities, children, homeless populations, and older adults?**

3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.
<p><i>Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: "Planetary Health &amp; Climate Justice" &amp; "Global Health." These lectures introduced the impacts of extreme heat, health risks, and climate change but were removed from the course this year. The topics that were explored in depth included the science of climate change, how it is accelerating, how it is affecting healthcare systems, and how it will specifically affect Rochester and patients in this area.</i></p>	

<b>1.10. Does your <u>medical school</u> curriculum address the unequal regional health impacts of climate change globally?</b>	
3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.
<p><i>Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: "Planetary Health &amp; Climate Justice" &amp; "Global Health." These lectures introduced the impacts of extreme heat, health risks, and climate change but were removed from the course this year. The topics that were explored in depth included the science of climate change, how it is accelerating, how it is affecting healthcare systems, and how it will specifically affect Rochester and patients in this area.</i></p> <p><i>The lecture on "Global Health" Refugee Health and Advocacy in Rochester, NY in which climate refugees are focused on in depth.</i></p> <p><i>Briefly mentioned in Foundations of Biopsychosocial Change, Meliora in Medicine, and Primary Care Clerkship courses when discussing social determinants of health and non-pharmacologic treatment of chronic disease. Environmental determinants are mentioned without any detail.</i></p> <p><i>As part of the Women's and Children's Health Basic Science Block in 3rd year, the session "Complementary Viewpoints: Climate Change and Health" includes a discussion of the relationships between health, food and water security, ecosystem health, and climate change.</i></p>	

***Curriculum: Environmental Health & the Effects of Anthropogenic Toxins on Human Health***

<b>1.11. Does your <u>medical school</u> curriculum address the reproductive health effects of industry-related environmental toxins (e.g. air pollution, pesticides)?</b>	
3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.

2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.
<p><i>Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: "Planetary Health &amp; Climate Justice" &amp; "Global Health." These lectures briefly mentioned reproductive health and environmental toxins but were removed from the course this year.</i></p> <p><i>In the first year course, Molecules to Cells, Dr. Fong discusses how teratogens can be related to errors in metabolism particularly in the context of migrant workers.</i></p>	

<b>1.12. Does your <u>medical school</u> curriculum address important human-caused environmental threats that are relevant to the university's surrounding community?</b>	
3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.
<p><i>Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: "Planetary Health &amp; Climate Justice" &amp; "Global Health." These lectures introduced the impacts of extreme heat, health risks, and climate change but were removed from the course this year. The topics that were explored in depth included the science of climate change, how it is accelerating, how it is affecting healthcare systems, and how it will specifically affect Rochester and patients in this area. Additionally, this lecture went into depth about how Rochester is vulnerable including flooding, temperatures, energy grid, agriculture, influx of climate refugees and the straining of services.</i></p>	

<b>1.13. To what extent does your <u>medical school</u> emphasize the importance of Indigenous knowledge and value systems as essential components of planetary health solutions?</b>	
3	Indigenous knowledge and value systems are <b>integrated throughout</b> the medical school's planetary health education
2	Indigenous knowledge and value systems as essential components of planetary health solutions are included <b>briefly</b> in the core curriculum.
1	Indigenous knowledge and value systems as essential components of planetary health solutions are included in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.
<p><i>Score explanation: This is not discussed</i></p>	

**1.14. Does your medical school curriculum address the outsized impact of anthropogenic**

**environmental toxins on marginalized populations such as those with low SES, women, communities of color, children, homeless populations, Indigenous populations, and older adults?**

3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.

*Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: "Planetary Health & Climate Justice" & "Global Health." These lectures introduced the impacts of extreme heat, health risks, and climate change but were removed from the course this year. The topics that were explored in depth included the science of climate change, how it is accelerating, how it is affecting healthcare systems, and how it will specifically affect Rochester and patients in this area.*

### **Curriculum: Sustainability**

**1.15. Does your medical school curriculum address the environmental and health co-benefits of a plant-based diet?**

3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum.
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.

*Score explanation: A plant-based diet is discussed in multiple lectures throughout 1st and 2nd year (in Molecules to Cells, Foundations for Biopsychosocial Practice, and the second year Primary Care Clerkship), however the focus is almost entirely on the health benefits and only mentions environmental benefits extremely briefly.*

*In the elective MED689 Lifestyle Medicine, plant based diets are discussed in depth and their benefits to the environment are mentioned.*

**1.16. Does your medical school curriculum address the carbon footprint of healthcare systems?**

3	This topic was explored <b>in depth</b> by the <b>core</b> curriculum
2	This topic was <b>briefly</b> covered in the <b>core</b> curriculum.
1	This topic was covered in <b>elective</b> coursework.
0	This topic was <b>not</b> covered.

*Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: "Planetary Health & Climate Justice" & "Global Health." These lectures introduced the*

*impacts of extreme heat, health risks, and climate change but were removed from the course this year. The topics that were explored in depth included the science of climate change, how it is accelerating, how it is affecting healthcare systems, and how it will specifically affect Rochester and patients in this area. The impact of healthcare systems on greenhouse gas emissions were discussed in depth.*

**1.17. Does your medical school curriculum cover these components of sustainable clinical practice in the core curriculum? (points for each)**

2	The health <b>and</b> environmental <b>co-benefits</b> of <b>avoiding</b> over-medicalisation, over-investigation and/or over-treatment
2	The environmental impact of <b>pharmaceuticals</b> and over-prescribing as a cause of climate health harm. Alternatively teaching on <b>deprescribing</b> where possible and its environmental and health co-benefits would fulfill this metric.
1	The health <b>and</b> environmental <b>co-benefits</b> of <b>non-pharmaceutical management</b> of conditions where appropriate such as exercise or yoga classes for type 2 diabetes; social group activities such as gardening for mental health conditions; active transport such as bicycle schemes. This is commonly known as social prescribing in the UK.
1	Environmental impact of <b>surgical</b> healthcare on planetary health and the climate crisis, and how can it be mitigated
1	The impact of <b>anaesthetic</b> gases on the healthcare carbon footprint and ways to reduce anesthesia environmental impacts, such as total intravenous anaesthesia or choosing less environmentally harmful anaesthetic gas options with reduced greenhouse gas emissions
1	The impact of <b>inhalers</b> on the healthcare carbon footprint and the environmental benefit of dry powdered inhalers over metered dose inhalers.
1	<b>Waste production</b> within healthcare <b>clinics</b> and strategies for reducing waste in clinical activities (e.g. single use items in the inpatient or outpatient setting)
	<i>Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: "Planetary Health &amp; Climate Justice" &amp; "Global Health." These lectures introduced the impacts of extreme heat, health risks, and climate change but were removed from the course this year. The topics that were explored in depth included the science of climate change, how it is accelerating, how it is affecting healthcare systems, and how it will specifically affect Rochester and patients in this area.</i>

***Curriculum: Clinical Applications***

**1.18. In training for patient encounters, does your medical school's curriculum introduce strategies to have conversations with patients about the health effects of climate change?**

2	Yes, there are strategies introduced for having conversations with patients about climate change in the <b>core</b> curriculum.
1	Yes, there are strategies introduced for having conversations with patients about climate change in <b>elective</b> coursework.

0	No, there are <b>not</b> strategies introduced for having conversations with patients about climate change
<i>Score explanation: Strategies for discussing the health effects of climate change are not introduced.</i>	

<b>1.19. In training for patient encounters, does your <u>medical school's</u> curriculum introduce strategies for taking an environmental history or exposure history?</b>	
2	Yes, the <b>core</b> curriculum includes strategies for taking an environmental history.
1	Only <b>elective</b> coursework includes strategies for taking an environmental history.
0	No, the curriculum does <b>not</b> include strategies for taking an environmental history.
<i>Score explanation: The curriculum does not include strategies for taking an environmental history. Students are encouraged to take a biopsychosocial approach, which includes environmental and occupational causes of presenting disease, but students are not taught specific strategies. Students are encouraged to ask about lead exposure risks and time outside in paediatrics but specific strategies are not taught or provided.</i>	

***Curriculum: Administrative Support for Planetary Health***

<b>1.20. Is your <u>medical school</u> currently in the process of implementing or improving Education for Sustainable Healthcare (ESH)/planetary health education?</b>	
4	Yes, the medical school is currently in the process of making <b>major</b> improvements to ESH/planetary health education.
2	Yes, the medical school is currently in the process of making <b>minor</b> improvements to ESH/planetary health education.
0	No, there are <b>no</b> improvements to planetary health education in progress.
<i>Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: "Planetary Health &amp; Climate Justice" &amp; "Global Health." These lectures introduced the impacts of extreme heat, health risks, and climate change but were removed from the course this year. The topics that were explored in depth included the science of climate change, how it is accelerating, how it is affecting healthcare systems, and how it will specifically affect Rochester and patients in this area.. There are currently no improvements to planetary health education in progress.</i>	

<b>1.21. How well are the aforementioned planetary health/Education for Sustainable Healthcare topics integrated longitudinally into the <u>core</u> curriculum?</b>	
6	Planetary health/ESH topics are <b>well integrated</b> into the core medical school curriculum.
4	<b>Some</b> planetary health/ESH topics are appropriately integrated into the core medical student curriculum.

2	Planetary health/ESH is not integrated and is primarily addressed in <b>(a) standalone lecture(s)</b> .
0	There is <b>minimal/no</b> education for sustainable healthcare.
<p><i>Score explanation: In years prior, there were two lectures during the Medical Evidence and Inquiry course titled: "Planetary Health &amp; Climate Justice" &amp; "Global Health." These lectures introduced the impacts of extreme heat, health risks, and climate change but were removed from the course this year. The topics that were explored in depth included the science of climate change, how it is accelerating, how it is affecting healthcare systems, and how it will specifically affect Rochester and patients in this area.</i></p>	

<b>1.22. Does your <u>medical school</u> employ a member of faculty to specifically oversee and take responsibility for the incorporation of planetary health and sustainable healthcare as a theme throughout the course?</b>	
1	<b>Yes, the medical school</b> has a specific faculty/staff member responsible for overseeing curricular integration of planetary health and sustainable healthcare
0	<b>No, the medical school</b> does <b>not</b> have a specific faculty/staff member responsible for overseeing curricular integration of planetary health and sustainable healthcare.
<p><i>Score explanation: Yes, we currently have two staff members Dr. Valerie Lou MD MPH who gave our lecture on Planetary Health and Climate Justice and is the ED Green Team Director and Dr. Sandra Jee MD MPH who is the Director of Finger Lakes Children's Environmental Health Center. Both of which supervise this club and are responsible for helping integrate planetary health into our curriculum.</i></p>	

<b>Section Total (19 out of 72)</b>	<b>D</b>
-------------------------------------	----------

Back to Summary Page [here](#)

*Are there additional curriculum resources offered at your medical school or institution not yet asked about that you would like to describe? If so, please do so below.*

# Interdisciplinary Research

***Section Overview:*** *This section evaluates the quality and quantity of interdisciplinary planetary health research at the medical school and broader institution. Interactions between health and the environment are complex and multifactorial. While climate change has been extensively studied from an environmental science perspective, planetary health is an emerging field. As leading health institutions with talented researchers and research resources, medical schools should fund research studying the health effects of climate change and anthropogenic environmental toxins. This obligation is particularly strong because the public and policymakers are more attentive to climate change when its implications for human health are emphasized.*

2.1. Are there researchers engaged in planetary health research and healthcare sustainability research at your <u>medical school</u> ?	
3	Yes, there are faculty members at the <b>medical school</b> who have a <b>primary</b> research focus in planetary health <b>or</b> healthcare sustainability.
2	Yes, there are individual faculty members at the <b>medical school</b> who are conducting research <b>related</b> to planetary health or healthcare sustainability, but it is not their primary research focus.
1	There are planetary health and/or healthcare sustainability researchers at the <b>institution</b> , but none associated with the medical school.
0	No, there are <b>no</b> planetary health and/or healthcare sustainability researchers at the <b>institution</b> or <b>medical school</b> at this time.
<p><i>Score explanation: While there are several researchers addressing planetary health or healthcare sustainability, we were unable to find any who do primary research with both focuses. There are 47 members of the Environmental Health Sciences Center who fit into this category. Some examples of faculty doing primary research include Valerie Lou, MD, MPH; Jane Van Dis, MD; C. Andrew Aligne, MD, MPH; Sandra Jee, MD, MPH; Kate Weber, MD.</i></p>	

2.2. Is there a dedicated department or institute for interdisciplinary planetary health research at your <u>institution</u> ?	
3	There is <b>at least one</b> dedicated department or institute for interdisciplinary planetary health research.
2	There is <b>not currently</b> a department or institute for interdisciplinary planetary health research, but there are <b>plans</b> to open one in the next 3 years.
1	There is an <b>Occupational and Environmental Health department</b> , but no interdisciplinary department or institute for planetary health research.
0	There is <b>no</b> dedicated department or institute.
<p><i>Score explanation: URSMD launched the <a href="#">Institute for Human Health and the Environment (IHHE)</a> in 2023 to support research, career development and education, and engagement. The IHHE focuses on transdisciplinary research in climate change, environmental justice, health impacts of water and air pollution, and lifetime health impacts of environmental factors. There are Research Catalyst Funds and</i></p>	

*a IHHE Exploration Grant to support both faculty and undergraduate research in environmental health.*

*The University of Rochester Clinical and Translational Science Institute, which is associated with URMC, joined the PHA in 2020 which may increase involvement in the Clinicians for Planetary health Initiative.*

*The Emergency Medicine Department at Strong Memorial Hospital has organised a multidisciplinary [Green Team](#) involved in various QI research and protocol implementation projects such as ED waste and biohazard reduction, and LEED certification research and advocacy for hospital buildings at URSMD.*

**2.3. Is there a process by which communities disproportionately impacted by climate change and environmental injustice give input or make decisions about the research agenda at your medical school?**

3	Yes, there is a process in which community members impacted by climate and environmental injustice have <b>decision-making power</b> in the climate + environmental research agenda.
2	Yes, there is a process in which community members impacted by climate and environmental injustice <b>advise</b> the climate + environmental research agenda.
1	<b>No</b> , but there are <b>current efforts</b> to establish a process for community members to advise or make decisions on the research agenda.
0	There is <b>no</b> process, and <b>no</b> efforts to create such a process.

*Score explanation: The Environmental Health Sciences Center (EHSC) was a previously-established center that has been incorporated into the IHHE. The EHSC has a 30 member Community Advisory Board, which has supported the Community Engagement Core in promoting multidirectional communication about EHSC research since 1998. The goal of this board is to support translation of EHSC research to meet community needs, and to identify and promote research to address these needs.*

*The Community Advisory Council was established in 2006 and represents the community to guide the University of Rochester Medical Center’s missions of Education, Research, and Patient Care. One main function of the CAC is to “contribute to the assessment and identification of community-health related priorities.” The CAC has produced a list of “priority research topics” that includes addressing the environmental health literacy of parents, understanding the economic and environmental impacts of abandoned property, and investigating the upward trend of asthma rates in Rochester. The CAC serves in an advisory capacity to URMC, but does not hold decision making power to dictate the medical school’s research agenda. The CAC website can be found [here](#).*

*The IHHE is in the process of developing their engagement pillar. The EHSC’s Community Advisory Council currently advises the larger IHHE umbrella.*

*Additionally, Dr. Valerie Lou is involved with both the [Climate Solutions Accelerator](#) (a 501(c)(3) nonprofit affiliated with URSMD that is dedicated to inspiring and facilitating a large-scale climate mobilisation in the Genesee-Finger Lakes Region), and a faculty working group at URSMD to strengthen the decision-making abilities of people at URSMD and the surrounding Rochester community who are disproportionately impacted by climate change and environmental injustice.*

**2.4. Does your institution have a planetary health website that centralizes ongoing and past research related to health and the environment?**

3	There is an <b>easy-to-use, adequately comprehensive</b> website that <b>centralizes</b> various campus resources related to health and the environment including all of the following: upcoming events, leaders in planetary health at your institution, and relevant funding opportunities.
2	There is a website that <b>attempts to centralize</b> various campus resources related to health and the environment, but it is hard-to-use, not updated, or not adequately comprehensive.
1	The <b>institution</b> has an <b>Office of Sustainability website</b> that includes <b>some</b> resources related to health and the environment.
0	There is <b>no</b> website.

*Score explanation: There is an Institute for Human Health and the Environment website that focuses on IHHE resources but does not refer to other initiatives and groups. There is also an EHSC website that includes more resources, but neither website is comprehensive .*

**2.5. Has your institution recently hosted a conference or symposium on topics related to planetary health?**

4	Yes, the <b>medical school</b> has hosted at least one conference or symposium on topics related to planetary health in the past year.
3	Yes, the <b>institution</b> has hosted at least one conference or symposium on topics related to planetary health in the past year.
2	Yes, the <b>institution</b> has hosted a conference on topics related to planetary health in the past three years.
1	The <b>institution</b> has not hosted any conferences directly, but they have provided financial support for a local planetary health event.
0	No, the <b>institution</b> has not hosted a conference on topics related to planetary health in the past three years.

*Score explanation: The [Human Health and the Environment Research Symposium](#) was hosted in June 2023 by the University of Rochester Medical Center. The IHHE plans to host annual symposia, including an upcoming [Housing, Health, and Environmental Justice Research Workshop](#) in May 2024.*

*The Microplastics Workgroup of Western NY (a UR-based group) hosts an annual symposium on this topic, with a strong emphasis on ecosystem and human health. The most recent workshop was held in June 2023.*

*IHHE also hosts the monthly lectures in the [Environmental Lectures in Global Health and Toxicology \(EnLIGHT\) seminar series](#), which focus the effect of environmental agents on health.*

*In addition, the FLCEHC hosts virtual monthly [Project ECHO](#) sessions hosted by physicians and environmental health researchers that discuss topics such as asthma triggers and the environment, pesticide exposure among farm workers and their families, preventing tick-borne diseases, local effects of climate change for the practising clinician, food justice and children's environmental health, and acute environmental toxic exposures in children. These sessions, however, are not traditional*

*“conferences’ ’ in the sense that one presentation is held per month and presenters are all affiliated with FLCEHC. URSMD has not formally hosted a traditional or virtual conference, with calls for research submissions, various presentations, etc., on topics related to planetary health in the past three years.*

**2.6. Is your medical school a member of a national or international planetary health or ESH organization?**

1	Yes, the medical school is a member of a national or international planetary health or ESH organization
0	No, the medical school is <b>not</b> a member of such an organization

*Score explanation: [As of November 2020](#), the University of Rochester Clinical & Translational Science Institute has joined the Planetary Health Alliance. The [UR CTSI](#) is a branch of the broader Medical Center that “provides funding, education, resources, and services to help research teams collaborate and produce results faster.” The CTSI strives “to advance science and medicine and improve the health of communities and populations.”  
The URSMD is not specifically a part of the PHA or GCCHE, but the Medical Student Sustainability Team anticipates joining the PHA within the next year.*

*Are there additional research resources offered at your medical school or institution not yet asked about that you would like to describe? If so, please do so below.*

# Community Outreach and Advocacy

***Section Overview:*** *This section evaluates medical school engagement in community outreach and advocacy efforts associated with planetary health. Researching and teaching planetary health is necessary but not sufficient. It is critical that institutions also directly engage with communities most affected by environmental health harms. Although climate change is a problem largely created by those with power and resources, its impacts fall disproportionately on under-resourced populations and communities of color. Institutions should partner with local communities affected by climate change and pollution to share information about environmental health threats, advocate together for change, and provide opportunities for students to be a part of this work.*

<b>3.1. Does your <u>medical school</u> partner with community organizations to promote planetary and environmental health?</b>	
3	Yes, the <b>medical school</b> meaningfully partners with <b>multiple</b> community organizations to promote planetary and environmental health.
2	Yes, the <b>medical school</b> meaningfully partners with <b>one</b> community organization to promote planetary and environmental health.
1	The <b>institution</b> partners with community organizations, but the medical school is not part of that partnership.
0	No, there is <b>no</b> such meaningful community partnership.
<p><i>Score explanation: The broader University of Rochester Medical Center partners with several community organizations to promote public &amp; environmental health, and individual clinical faculty play a great role in these efforts. For example, Dr. Valerie Lou has partnered with the <a href="#">Climate Solutions Accelerator</a>, <a href="#">Finger Lakes Children’s Environmental Health Center</a>, and the city of Rochester’s <a href="#">Office of Energy and Sustainability</a> to push for sustainable efforts. She has also collaborated with the NYS CHECK summer academy initiative which is involved in training high school students to graduate level/medical students in environmental health and sustainability topics. Additionally, Dr. Sandra Jee has worked with the FLCEHC and the <a href="#">Champion Academy</a>, a mentoring and empowerment initiative for tennagers in poverty, to promote PH education, programming, and awareness. Medical students have and are encouraged to get involved with these organizations. The FLCEHC also has plenty of collaborations with community partners like <a href="#">Coalition to prevent Lead poisoning</a>, which addresses EH concerns in housing and lead poisoning. The Center for Community Health and Prevention at the University of Rochester will also bring in community partners like Food Link and organizations that promote sustainability to the community fairs for students to get involved. The involvement would be self-directed. A student-led medical student interest group partners with <a href="#">InterVol</a>, a local organization dedicated to sustainability and reducing medical waste here and abroad, however it is not particularly active and very little of the organization’s educational mission is carried within the medical school. In sum, the medical school staff, administration, and student groups are largely uninvolved in any of the partnerships with local organizations.</i></p>	

<b>3.2. Does your <u>medical school</u> offer community-facing courses or events regarding planetary health?</b>
--

3	The <b>medical school</b> offers community-facing courses or events at least once every year.
2	The <b>medical school</b> offers courses or events open to the community at least once per year, but they are not primarily created for a community audience.
1	The <b>institution</b> has offered community-facing courses or events, but the <b>medical school</b> was not involved in planning those courses or events.
0	The <b>institution/medical school</b> have not offered such community-facing courses or events.
<p><i>Score explanation: Similar to the above explanation, URMC offers several community-facing courses and events regarding PH, but the medical school specifically is not involved in planning these events. For example, Dr. Sandra Jee offers public health education for teenagers in the Champion Academy program as mentioned above. Additionally, Dr. Valerie Lou works with URMC's <a href="#">Community Engagement Core</a> and teaches principles of PH to <a href="#">Horizons</a> students, a summer program hosted at the Warner School of Education on UR's River Campus that is "dedicated to improving the academic and wellness trajectory of students from marginalized families by instilling in them the joy of learning, the skills for success, and the inspiration to realize their dreams." Dr. Lou has also started working with the NYS CHECK Academy which is a virtual training program for students in environmental health advocacy. Lastly, Jeffrey Wyatt, DVM, MPH is an attending veterinarian and faculty in the Department of Comparative Medicine at URMC who provides yearly PH education to community members as a conservation ambassador at the Seneca Park Zoo. However, medical school administration, staff, faculty, and students are generally not involved in the planning of these courses, and generally are unaware of these opportunities.</i></p>	

<b>3.3. Does your <u>medical school</u> have regular coverage of issues related to planetary health and/or sustainable healthcare in university update communications?</b>	
2	Yes, all students <b>regularly</b> receive communication updates dedicated to planetary health and/or sustainable healthcare.
1	Yes, planetary health and/or sustainable healthcare topics are <b>sometimes</b> included in communication updates.
0	Students <b>do not</b> receive communications about planetary health or sustainable healthcare.
<p><i>Score explanation: Students at URSMD do not regularly receive communication from medical school and/or general hospital administration regarding planetary health or sustainable healthcare. However, current sustainable healthcare topics are frequently discussed at our Advisory Dean lunch meetings, though the extent of discussion and topics for discussion are at the discretion of the Advisory Dean.</i></p>	

<b>3.4. Does the <u>institution</u> or <u>main affiliated hospital trust</u> engage in professional education activities targeting individuals post graduation with the aim of ensuring their knowledge and skills in planetary health and sustainable healthcare remain up to date during their professional career?</b>	
2	Yes, the <b>institution</b> or <b>main affiliated hospital trust</b> offers multiple in-person or online courses relating to planetary health and/or sustainable healthcare for post-graduate providers, including at least one with a primary focus of planetary health.

1	Yes, the <b>institution</b> or <b>main affiliated hospital trust</b> offers one course relating to planetary health and/or sustainable healthcare for post-graduate providers
0	There are <b>no</b> such accessible courses for post-graduate providers
<p><i>Score explanation: The FLCEHC's <a href="#">Project ECHO</a> offers monthly virtual lectures on a variety of EH- and PH-related topics that are each eligible for one hour of CME credits. The project aims to address health outcomes while reducing socioeconomic barriers and giving more multi-disciplinary training. Past ECHO session topics include "Asthma Triggers and the Environment," "Preventing Tick-Borne Diseases," and "The Local Effects of Climate Change on the Practicing Physician." There is another course which encourages post-graduate learning but is not confirmed for CME credits (Enlight).</i></p>	

<b>3.5. Does your <u>medical school</u> or its <u>affiliated teaching hospitals</u> have accessible educational materials for patients about environmental health exposures?</b>	
2	Yes, the <b>medical school</b> or <b>all affiliated hospitals</b> have accessible educational materials for patients.
1	<b>Some</b> affiliated hospitals have accessible educational materials for patients.
0	<b>No</b> affiliated medical centers have accessible educational materials for patients.
<p><i>Score explanation: The <a href="#">Finger Lakes Children's Environmental Health Center</a> is affiliated with Golisano Children's Hospital and is composed of a conglomerate of physicians and environmental health researchers to provide clinical services, education, and outreach for environmentally-related conditions in the Greater Finger Lakes area. The organization gives professional presentations to healthcare providers, local health department staff, educational institutions, and community groups. This website is user-friendly and has amalgamated a number of local and state <a href="#">resources</a> related to environmental health, many of which are directed for patients. Here, experts in fields of child health, pregnancy, breastfeeding, and medical toxicology can provide guidance to any questions or concerns of exposures.</i></p>	

<b>3.6. Does your <u>medical school</u> or its <u>affiliated teaching hospitals</u> have accessible educational materials for patients about the health impacts of climate change?</b>	
2	Yes, the <b>medical school</b> or <b>all affiliated hospitals</b> have accessible educational materials for patients.
1	<b>Some</b> affiliated hospitals have accessible educational materials for patients.
0	<b>No</b> affiliated hospitals have accessible educational materials for patients.
<p><i>Score explanation: The University of Rochester Medical Center itself does not leave any educational materials for patients on climate change related health impacts. Sustainability may be emphasized but nothing concrete is provided. Apart from the institution, the <a href="#">Finger Lakes Children's Environmental Health Center</a> has a webpage with a number of local and state <a href="#">resources</a> related to environmental health, many of which are directed for patients. None of the resources specifically address climate change and health impacts.</i></p>	

Section Total (4 out of 14)	D+
-----------------------------	----

Back to Summary Page [here](#)

*Are there additional community engagement and advocacy resources offered at your medical school or institution not yet asked about that you would like to describe? If so, please do so below.*

## Support for Student-Led Planetary Health Initiatives

**Section Overview:** *This section evaluates institutional support for student-led planetary health initiatives, such as funding, fellowships, programming, and student groups. Planetary health is a young field and, as young people facing a future deeply shaped by climate change, students are often some of the first at an institution to engage with it. Institutions should provide support for students to engage in sustainability quality improvement (QI) initiatives, discover mentors in their area of interest, and receive funding for planetary health projects.*

4.1. Does your <u>medical school</u> or your <u>institution</u> offer support for medical students interested in enacting a sustainability initiative/QI project?	
2	Yes, the <b>medical school</b> or <b>institution</b> <i>either</i> offers grants for students to enact sustainability initiatives/QI projects <i>or</i> sustainability QI projects are part of the core curriculum.
1	The <b>medical school</b> or <b>institution</b> encourages sustainability QI projects (to fulfill clerkship or longitudinal requirements) and offers resources to help students succeed in these projects, <b>but</b> there is no student funding available and there is no requirement to participate.
0	No, <b>neither</b> the medical school or the institution offer opportunities or support for sustainability initiatives or QI projects.
<p><i>Score explanation: Medical students have the opportunity to engage and enact sustainability initiatives through the Medical Students for Sustainability Team (MSST) student group. This group is well-supported through relationships with faculty mentors Drs. Sandra Jee and Valerie Lou, and is a registered chapter of Medical Students for a Sustainable Future. Faculty mentors are easily accessible to individual students as well via email or after guest lectures. The medical school encourages students after their first year of medical school to find a faculty mentor to engage in summer research with. Summer research stipends covering eight weeks of work as well as a poster presentation are offered by the Office of Medical Education, which can certainly incorporate an environmental health, planetary health, or sustainability in healthcare component. Thus, while there is no dedicated funding specifically for sustainability initiatives, medical students can certainly find meaningful opportunities to integrate these topics into their research.</i></p>	

4.2. Does your <u>institution</u> offer opportunities for medical students to do research related to planetary health and/or sustainable healthcare?	
2	The <b>institution</b> has a <b>specific</b> research program or fellowship for students interested in doing planetary health/sustainable healthcare research.
1	There are research opportunities for students to perform research related to planetary health/sustainable healthcare, but these <b>require student initiative</b> to seek these out and carry them out in their spare time.
0	There are <b>no opportunities</b> for students to engage in planetary health/sustainable healthcare research.
<p><i>Score explanation: No funds are specifically designated for planetary health research, but such projects could be eligible for funding from at least two sources: 1) Basic Science, Clinical, Translational Research. 2) CCH E. Cowles Andrus Summer Fellowship for Community Health</i></p>	

*Improvement. The Institute for Human Health and the Environment also provides funding for faculty and undergraduate students to conduct research.*

**4.3. Does the medical school have a webpage where medical students can find specific information related to planetary health and/or sustainable healthcare activities and mentors within the medical school? For example, projects achieved, current initiatives underway at the medical school and/or contact of information of potential mentors.**

2	The <b>medical school</b> has a webpage with specific information related to planetary health or sustainable healthcare that includes up-to-date information on relevant initiatives and contact information of potential mentors.
1	There is a <b>medical school</b> webpage that features some information on projects and mentors within planetary health and sustainable healthcare within the medical school, but it lacks key information.
0	There is <b>no medical-school</b> specific webpage for locating planetary health and/or sustainable healthcare projects or mentors.

*Score explanation: While there are no medical school-specific pages on planetary health or sustainable healthcare, there nonetheless is the Golisano Finger Lakes Children's Environmental Health Center website (an affiliate of the University of Rochester Medical Center) (<https://www.urmc.rochester.edu/environmental-health-sciences.aspx>). This organization is focused on conducting research to understand the impact of environmental exposures on human health and to develop strategies to address these factors. The organization shares information on different cores and facilities under its umbrella, notably a Community Engagement Core which aims to provide relevant environmental health information to the larger community. It lists various community projects that it is actively engaged in. While it does not provide specific guidance on planetary health activities that students can engage with, it lists faculty and staff members that may be open to serving as mentors for medical students. Likewise, the Institute for Human Health and the Environment is dedicated to evaluating how environmental exposures affect healthcare outcomes and is actively engaged with interdisciplinary research. Similar to the Golisano Finger Lakes Children's Environmental Health Center, it does not include a page dedicated exclusively to students; that being said, it lists several faculty and staff members engaged in research with the organization that students are able to reach out to if they would like to become involved.*

**4.4. Does your medical school have registered student groups dedicated towards fostering a culture of planetary health engagement, scholarship, and advocacy on campus, supported by faculty advisors?**

2	Yes, there is a student organization <b>with faculty support</b> at my medical school dedicated to planetary health or sustainability in healthcare.
1	Yes, there is a student organization at my medical school dedicated to planetary health or sustainability in healthcare but it <b>lacks faculty support</b> .
0	No, there is <b>not</b> a student organization at my institution dedicated to planetary health or sustainability in healthcare.

*Score explanation: The Medical Students for Sustainability Team (MSST) is officially recognized by the Student Senate as a student interest group with funding and designated faculty sponsors (Drs. Sandra Jee and Valerie Lou).*

**4.5. Is there a student liaison representing sustainability interests who serves on a medical school or institutional decision-making council to advocate for curriculum reform and/or sustainability best practices?**

1	Yes, there is a student representative that serves on a medical school or institutional decision-making council/committee.
0	No, there is no such student representative.

*Score explanation: While there is no designated student representative who serves in an official capacity on a medical school or institutional decision-making council to advocate for sustainability best practices, student feedback is greatly valued by the administration. The MSST team here at the University of Rochester School of Medicine and Dentistry intends to share its input with student leaders in positions on class councils, curriculum boards, etc. to make its voice heard.*

**4.6. In the past year, has the institution had one or more co-curricular planetary health programs or initiatives in the following categories? (1 point each)**

1	Projects where students are able to gain experience in organic agriculture and sustainable food systems, such as gardens, farms, community supported agriculture (CSA), fishery programs, or urban agriculture projects.
1	Panels, speaker series, or similar events related to planetary health that have students as an intended audience.
1	Events in which students learn directly from members of a local environmental justice community about the climate and environmental challenges they face, and how health professionals can partner with their community to address these exposures and impacts.
1	Cultural arts events, installations or performances related to planetary health that have students as an intended audience.
1	Local volunteer opportunities related to building community resilience to anthropogenic environmental impacts.
1	Wilderness or outdoors programs (e.g., that organize hiking, backpacking, kayaking, or other outings for students)

*Score explanation: Engagement with Foodlink, a local nonprofit that promotes food sustainability and insecurity in the area, is directly integrated into the spring 2024 first-year clinical medicine course "Foundations of Biopsychosocial Practice." Students are required to complete a tour of Foodlink's facility as well as one volunteer session with the organization, and are encouraged to become further involved.*

*Additionally, the Department of Environmental Medicine hosts several events and talks throughout*

*the academic year on environmental exposures and their health impacts, as well as climate change. Examples of events include Dr. Francesca Dominici's presentation on using data science to understand climate vulnerability and Dr. Daniel Croft's talk on the relationships between climate change, air pollution, and respiratory infections (both events were held in December 2023), among others. These programs are optional, in contrast with the FBP source, and could benefit from more advertising in future years.*

*Furthermore, the Wilderness Medicine Interest Group in September 2022 organized an outdoor camping and hiking trip to Letchworth State Park for students. This event adhered to Leave No Trace principles. The University of Rochester's emergency medicine residency program also offers a Wilderness Medicine track. Finally, the residency program's "ED Green Team" is an interdisciplinary team consisting of physicians, nurses, administrators, and others dedicated to finding ways to make Strong Memorial Hospital more sustainable. It is actively engaged with community projects such as biohazard waste reduction, as well as participates in community trash pickups.*

**Section Total (9 out of 15)**

**B-**

Back to Summary Page [here](#)

*Are there additional student-led initiative resources offered at your medical school or institution not yet asked about that you would like to describe? If so, please do so below.*

# Campus Sustainability

***Section Overview:*** *This section evaluates the support and engagement in sustainability initiatives by the medical school and/or institution. The healthcare industry is a major contributor to greenhouse gas emissions as well as pollution that harms local, regional, and global ecosystems. While healthcare is, by nature, a resource-intensive endeavor, the healthcare sector is well poised to lead the world to a more sustainable future. This will involve scrutinizing every aspect of how our systems operate, from where we source our energy, to how we build our infrastructure, to what companies we invest in. Our medical schools, clinics, and hospitals must set the standard for sustainable practices, and show other sectors what is possible when it comes to minimizing environmental impact.*

5.1. Does your <u>medical school</u> and/or <u>institution</u> have an Office of Sustainability?	
3	Yes, there is an Office of Sustainability with multiple full-time staff dedicated to campus sustainability. If the Office of Sustainability serves the entire campus, there is <b>at least one designated staff member</b> for sustainability at the hospital and/or medical school.
2	There is an Office of Sustainability with one or more full-time staff dedicated to campus sustainability, but <b>no specific staff member</b> in charge of medical school and/or hospital sustainability.
1	There are <b>no salaried sustainability staff</b> , but there is a sustainability task force or committee
0	There are <b>no</b> staff members <b>or</b> task force responsible for overseeing campus sustainability
<p><i>Score explanation: The University of Rochester previously had an institution-wide sustainability committee that was disbanded in May 2019. A new committee has not yet been established.</i></p> <p><i>There is no Office of Sustainability at the University. However, the University does have one salaried staff member with the title of Sustainability Communications and Engagement Coordinator who is housed within the Support Operations department of University Facilities and Services. There is no specific staff member in charge of medical school or hospital sustainability.</i></p>	

5.2. How ambitious is your <u>institution/medical school</u> plan to reduce its own carbon footprint?	
5	The institution/medical school has a <b>written and approved plan</b> to achieve carbon neutrality by <b>2030</b>
3	The institution/medical school has a <b>written and approved plan</b> to achieve carbon neutrality by <b>2040</b>
1	The institution/medical school has a stated goal of carbon neutrality by <b>2040</b> but has <b>not created a plan</b> to reach that goal or the <b>plan is inadequate</b>
0	The institution/medical school does <b>not</b> meet any of the requirements listed above
<p><i>Score explanation: Neither the University of Rochester or the Medical Center have any written goals aiming for carbon neutrality. However, this year they have been partnering with local solar</i></p>	

energy farms (AMP energy) to use more renewable energy and minimize their carbon footprint. Approximately 3-4 years ago, there was a verbal commitment made by the Executive VP for Facilities to both the Sustainability Council and the undergraduate Student Association for a reduction of 1% per year.

**5.3. Do buildings/infrastructure used by the medical school for teaching (not including the hospital) utilize renewable energy?**

3	Yes medical school buildings are <b>100%</b> powered by renewable energy
2	Medical school buildings source <b>&gt;80%</b> of energy needs from off-site and/or on-site renewable energy.
1	Medical school buildings source <b>&gt;20%</b> of energy needs from off-site and/or on-site renewable energy.
0	Medical school buildings source <b>&lt;20%</b> of energy needs from off-site and/or on-site renewable energy.

*Score explanation: The University of Rochester has a small on-site solar installation and is required to purchase a small number of Renewable Energy Certificates from New York State, but these sources meet less than 20% of the school's energy needs. The local grid for the medical school buildings is partially powered by renewables. The cogen plant runs on natural gas and so any renewable energy is <20%. Facilities staff estimated prior to 2023 that about 15% of the energy used in teaching and laboratory buildings comes from non-carbon emitting sources. However, there is a recent agreement with the local solar energy farms (AMP Energy) to receive more solar energy. It is unclear how much of their energy needs come from the new partnership.*

**5.4. Are sustainable building practices utilized for new and old buildings on the medical school campus, with design and construction of new buildings and remodeling of old buildings conforming to a published sustainability rating system or building code/guideline?**

3	Yes, sustainable building practices are utilized for new buildings on the medical school campus and the <b>majority</b> of old buildings <b>have been retrofitted</b> to be more sustainable.
2	Sustainable building practices are utilized for new buildings on the medical school campus, but most old buildings have <b>not been retrofitted</b> .
1	Sustainable building practices are <b>inadequately or incompletely</b> implemented for new buildings.
0	Sustainability is <b>not considered</b> in the construction of new buildings.

*Score explanation: The Saunders Research Building (completed in 2011) received LEED Gold certification, and efforts were made to use local materials in its construction. However, other buildings have not been held to the same standards.*

**5.5. Has the medical school or institution implemented strategies to encourage and provide environmentally-friendly transportation options for students and reduce the environmental impact of commuting?**

2	Yes, the medical school or institution has implemented strategies to encourage and provide <b>environmentally-friendly transportation options</b> such as safe active transport, public transport, or carpooling and these options are well-utilized by students. Alternatively, the campus location is not amenable to unsustainable forms of transportation by default.
1	The medical school or institution has implemented <b>some</b> strategies to provide environmentally-friendly transportation options, but the options are <b>unsatisfactorily</b> accessible or advertised.
0	The medical school or institution has <b>not</b> implemented strategies to encourage and provide environmentally-friendly transportation options.

*Score explanation: A large majority of medical students live within walking distance of the medical school and Strong Memorial Hospital, so they are only required to drive to certain clinical experiences. The university has a robust [carpooling program](#) for all faculty, staff, and students that is well-utilized by medical students who live further away. [Biking](#) is also encouraged through covered bike parking in the hospital parking garage and accessible showers for bike commuters. Employees who don't have parking passes can get free occasional parking passes for emergencies.*

**5.6. Does your medical school have an organics recycling program (compost) and a conventional recycling program (aluminum/paper/plastic/glass)?**

2	Yes, the medical school has <b>both</b> compost <b>and</b> recycling programs accessible to students and faculty.
1	The medical school has <b>either</b> recycling <b>or</b> compost programs accessible to students and faculty, but not both.
0	There is <b>no</b> compost or recycling program at the medical school.

*Score explanation: The University of Rochester has a [recycling program](#) that includes the Medical Center (medical school, research buildings, and Strong Memorial Hospital). Mixed paper/cardboard, plastic, glass, and cans are all accepted. Recyclable items such as ink jet cartridges and batteries are accepted through special drop-off locations as well. The university does not have a composting program that is available to students and faculty.*

**5.7. Does the medical school apply sustainability criteria when making decisions about the campus food and beverage selections (e.g. local sourcing, reduced meat, decreased plastic packaging)?**

3	Yes, the medical school has <b>adequate</b> sustainability requirements for food and beverages, including meat-free days or no red-meat, and <b>is engaged</b> in efforts to increase food and beverage sustainability.
2	There are sustainability guidelines for food and beverages, but they are <b>insufficient or optional</b> . The medical school <b>is engaged</b> in efforts to increase food and beverage sustainability.
1	There are sustainability guidelines for food and beverages, but they are <b>insufficient or optional</b> . The medical school is <b>not</b> engaged in efforts to increase food and beverage sustainability.

0	There are <b>no</b> sustainability guidelines for food and beverages.
<p><i>Score explanation: Score explanation: University of Rochester Dining Services actively works to improve food and beverage sustainability, but they mainly oversee undergraduate dining locations that are not well utilized by medical students. We were unable to find sustainability requirements that apply specifically to Medical Center dining locations.</i></p> <p><i><a href="#">Cafe 601</a> at Strong Memorial Hospital is highly utilized by medical students. The Cafe purchases locally as much as possible, including from three major vendors that are local businesses. All dairy products in the Cafe are from New York State and all take-out containers are compostable and recyclable. Finger Lakes Coffee Roasters at the Medical Center also exclusively sources organic coffees from farms that have strict waste management protocols. We were not able to find any information on sustainability practices at the Metro Deli, another Medical Center dining location that medical students often use.</i></p>	

5.8. Does the <u>medical school</u> or <u>institution</u> apply sustainability criteria when making decisions about supply procurement?	
3	Yes, the medical school has <b>adequate</b> sustainability requirements for supply procurement <b>and is engaged</b> in efforts to increase sustainability of procurement.
2	There are sustainability guidelines for supply procurement, but they are <b>insufficient or optional</b> . The medical school is <b>engaged</b> in efforts to increase sustainability of procurement.
1	There are sustainability guidelines for supply procurement, but they are <b>insufficient or optional</b> . The medical school is <b>not engaged</b> in efforts to increase sustainability of procurement.
0	There are <b>no</b> sustainability guidelines for supply procurement.
<p><i>Score explanation: The University of Rochester sustainability procurement guidelines can be found <a href="#">here</a>. Because this policy is not actively enforced, we consider it to be optional. Our medical school environmental services department is engaged in sustainability efforts and strives to purchase environmentally sustainable cleaning products whenever possible, including the recent purchase of sustainable bin liners.</i></p>	

5.9. Are there sustainability requirements or guidelines for events hosted at the <u>medical school</u> ?	
2	Every event hosted at the medical school <b>must</b> abide by sustainability criteria.
1	The medical school <b>strongly recommends or incentivizes</b> sustainability measures, but they are <b>not required</b> .
0	There are <b>no</b> sustainability guidelines for medical school events.
<p><i>Score explanation: Our medical school does not have sustainability guidelines for events.</i></p>	

5.10. Does your <u>medical school</u> have programs and initiatives to assist with making lab spaces
--

more environmentally sustainable?	
2	Yes, the medical school has <b>programs</b> and <b>initiatives</b> to assist with making lab spaces more environmentally sustainable.
1	There are <b>guidelines</b> on how to make lab spaces more environmentally sustainable, but not programs or initiatives.
0	There are <b>no</b> efforts at the medical school to make lab spaces more sustainable.
<i>Score explanation: We were unable to find any evidence of medical-school wide guidelines or efforts to make research spaces more sustainable.</i>	

5.11. Does your <u>institution's</u> endowment portfolio investments include fossil-fuel companies?	
4	The institution is <b>entirely divested</b> from fossil fuels <b>and</b> has made a <b>commitment to reinvest divested funds</b> into renewable energy companies or renewable energy campus initiatives.
3	The institution is <b>entirely divested</b> from fossil fuels.
2	The institution has <b>partially divested</b> from fossil fuel companies <b>or</b> has made a <b>commitment to fully divest</b> , but <b>currently</b> still has fossil fuel investments.
1	The institution has <b>not divested</b> from fossil-fuel companies, but faculty and/or students are <b>conducting organized advocacy</b> for divestment.
0	Yes, the institution has investments with fossil-fuel companies and there have been <b>no efforts</b> to change that.
<i>Score explanation: The Investment Committee of the University's Board approved the EIAC's (Ethical Advisory Committee) recommendation that the university stop all future investment in fossil fuels in 2023 (<u>report</u> and actions of the Investment Committee). The University of Rochester has joined the <u>Climate Action 100+</u> team that calls for clear commitments to cut emissions, improve governance and strengthen climate-related financial disclosures. This decision did not require any divestment, but it will improve long-term investment pools (up to ten years), so the university will eventually phase out of its current fossil fuel investments as the partnerships reach maturity.</i>

*Are there additional sustainability resources offered at your medical school or institution not yet asked about that you would like to describe? If so, please do so below.*

## Grading

**Section Overview**

This section focuses on the grading of the report card. The institution received a grade for each of the individual sections as well as an overall institutional grade. Section point totals were tallied, divided

by the total points available for the section, and converted to a percentage. The overall institutional grade is a weighted average of the section grades, with curriculum receiving a higher weight owing to its larger number of metrics. Letter grades for each section and the institution overall were then assigned according to the table below.

Letter Grade*	Percentage
A	80% - 100%
B	60% - 79%
C	40% - 59%
D	20% - 39%
F	0% - 19%

*\*Within each grade bracket, a score in the top 5% ( \_5 to \_9%), receives a “+”, and a score in the bottom 5% ( \_0- \_4%) receives a “--”. For example, a percentage score of 78% would be a B+.*

**Planetary Health Grades for the University of Rochester School of Medicine and Dentistry**

The following table presents the individual section grades and overall institutional grade for the University of Rochester School of Medicine and Dentistry on this medical-school-specific Planetary Health Report Card.

Section	Raw Score %	Letter Grade
<b>Planetary Health Curriculum (30%)</b>	$(19/72) \times 100 = 26.4\%$	D
<b>Interdisciplinary Research (17.5%)</b>	$(13/17) \times 100 = 76.5\%$	B+
<b>Community Outreach and Advocacy (17.5%)</b>	$(4/14) \times 100 = 28.6\%$	D
<b>Support for Student-led Planetary Health Initiatives (17.5%)</b>	$(9/15) \times 100 = 60.0\%$	B-
<b>Campus Sustainability (17.5%)</b>	$(13/32) \times 100 = 40.3\%$	D+
<b>Institutional Grade</b>	$(A \times 0.3 + B \times 0.175 + C \times 0.175 + D \times 0.175 + E \times 0.175) = 43.91\%$	<b>C-</b>
